Is democracy still the best political regime for countries to adapt to economic and technological pressures and increase their level of prosperity? While the West seems to have stagnated in an environment of political mistrust, increasing inequality and low growth, the rise of the East has shown that it may not be liberal democracy that is best at accommodating the social mutations that technologies have triggered. The cases of China and Italy form the research focus as two extremes in growth performance. China is the star of globalisation in the East, while Italy is the laggard of globalisation in the West and a laboratory of creeping political meltdown now shared by other major Western economies. But is this forever? Introducing the 'innovation paradox' as the main challenge to the West and the notion of 'knowledge democracy' as key to sustainable growth, this book presents a new side to the debate on the Fourth Industrial Revolution (or fifth as the authors argue). It is a vital reading for all those questioning what kind of democracy positively impacts innovation as the force whose speed and direction transforms societies and economies.

This book describes the extensive contributions made toward the advancement of human assessment by scientists from one of the world's leading research institutions, Educational Testing Service. The book's four major sections detail research and development in measurement and statistics, education policy analysis and evaluation, scientific psychology, and validity. Many of the developments presented have become de-facto standards in educational and psychological measurement, including in item response theory (IRT), linking and equating, differential item functioning (DIF), and educational surveys like the National Assessment of Educational Progress (NAEP), the Programme of international Student Assessment (PISA), the Progress of International Reading Literacy Study (PIRLS) and the Trends in Mathematics and Science Study (TIMSS). In addition to its comprehensive coverage of contributions to the theory and methodology of educational and psychological measurement and statistics, the book gives significant attention to ETS work in cognitive, personality, developmental, and social psychology, and to education policy analysis and program evaluation. The chapter authors are long-standing experts who provide broad coverage and thoughtful insights that build upon decades of experience in research and best practices for measurement, evaluation, scientific psychology, and education policy analysis. Opening with a chapter on the genesis of ETS and closing with a synthesis of the enormously diverse set of contributions made over its 70-year history, the book is a useful resource for all interested in the improvement of human assessment.
