Authored by nationally recognized scholar and behavioral consultant Dr. John W. Maag, this book focuses primarily on students' observable behaviors and the environmental factors that affect their expression. As Maag points out, behavior management is probably one of the most misunderstood concepts in education. Written in a very accessible style, this book demystifies stereotypical beliefs and misconceptions regarding the use of reinforcement, punishment, and self-control. Maag offers clear, but detailed descriptions of proven intervention techniques, supplemented by a range of step-by-step guidelines, sample forms, charts, graphs, and illustrations that assist teachers in implementing the techniques. Although the techniques described in the book are based on a sound theoretical and empirical foundation, the author limits the use of technical jargon and infuses real-life examples and case studies that clarify and illuminate the presentation. instrument that describes ways to analyze one's own specific behaviors in terms of the factors that lead to and maintain them and ways to manage those factors to improve the behaviors. The text is based on research, theory, and experiences to explain and provide examples of the concepts and methods of self-management in a comprehensive text. It focuses on topics in applied behavior analysis, behavior modification, behavior therapy, and psychology of learning. Two general topics shaped this text: making the book relative to a variety of fields by describing applications in psychology, education, counseling, nursing, and physical therapy and different academic levels and preparation. Several important objectives guided the content and organization of the text which is designed to cover a large majority of tasks or concepts that the Behavior Analyst Certification Board (www.bacb.com) has identified as the field's essential content and should be mastered by all behavior analysts.

How do mothers cope with child care and associated problems when, in adversity, they do not gain access to social service support? This book considers the important question of mothers' coping strategies when they are in adversity. Drawing upon the women's own accounts, it focuses not only on what they do themselves to deal with their problems, but how they integrate their own problem solving approaches with the use of supports. It also examines the way in which women cope with their own emotional responses to these problems. The women themselves, and their own accounts are placed 'centre stage' in this book. In doing this the book is able to create a major development in our understanding of the nature of Prevention, a central concept in welfare provision. Drawing upon Coping theory, and the findings of this study, this book extends and develops the concept of Prevention, creating a multidimensional model in which the actions of the mother herself (and other primary caregivers) are included alongside traditional domains. It will be of interest to a variety of academic and professional disciplines, including those interested in gender studies, sociology, social policy,
