How has globalization worked for women working on the frontlines of neoliberalism on the Mexico-US border? This border divides "US" from "Others," and produces social inequalities that form a site where marginalized border women encounter the othering power of neoliberalism and confront inequalities of gender and class. Within this context, a critical comparison of socially similar women, working either in export production industries or in small-scale commerce and low-level services in Ciudad Juárez, reveals how export factory work constrains women's empowerment at home – as well as the wages they earn and the well-being of their households. This volume challenges the neoliberal rationale of "empowering" women to support market growth, and argues instead for understanding women's empowerment as a process of transformation from disempowerment by gender power relations to challenging masculinist domination in households and, ultimately, the economy and society. Because structures of gender and globalization are mutually constituted, women's empowerment as gender democracy is integral to producing alternative, democratic globalization. Using a feminist methodology that gives attention to the standpoint of women located on the downside of social hierarchies and takes into account strategically diverse points of view, this study develops analysis to counter neoliberal globalization as it touches down in the lives of ordinary women and men on the border and beyond.

Compendium of Hydrogen Energy: Hydrogen Production and Purification, the first text in a four-volume series, focuses on the production of hydrogen. As many experts believe that the hydrogen economy will eventually replace the fossil fuel economy as our primary source of energy, the text provides a timely discussion on this interesting topic. The text details the methods of hydrogen production using fossil fuels, also exploring sustainable extraction methods of hydrogen production from water and hydrogen purification processes. Provides a comprehensive understanding of the current methods used in the production of hydrogen Discusses the hydrogen economy and its potential to replace fossil fuels as our primary source of energy Details the methods of hydrogen production using fossil fuels, also exploring sustainable extraction methods of hydrogen production from water and hydrogen purification processes

This unified survey focuses on linear discrete-time systems and explores natural extensions to nonlinear systems. It emphasizes discrete-time systems, summarizing theoretical and practical aspects of a large class of adaptive algorithms.

This book examines the forced displacement of public housing residents in Sydney's Millers Point and The Rocks communities. It considers the strategies deployed by the government to pressure tenants to move, and the social and personal impacts of the displacement on the residents themselves. Drawing on in-depth interviews with tenants alongside government and media communications, the Millers Point case study offers a penetrating and moving analysis of gentrification and displacement in one of Australia's oldest and more unique working class and public housing neighbourhoods. Gentrification and Displacement advances work in urban studies by charting trends in urban renewal and displacement, furthering our understanding of public housing, gentrification and the effects of forced relocation on vulnerable urban communities.

This book establishes a nexus between corruption in public procurement and the prevailing crisis of governance in Africa. The African continent is characterised by the growing concern for the deteriorating human security. In the midst of these woes, African political leaders are known for their stupendous wealth and riches through expropriation of national resources for personal benefits. This growing inequality in the continent has become a major driver for a series of violent and criminal activities, which have added to the worsening governance crisis. Thus, the abuse of public power for advancing private gain constitutes an impediment to effective public service delivery, thereby engendering a crisis of governance. The consequence of this is not limited to the socio-economic growth and welfare of citizens, but it often also jeopardizes the democratic credentials and objectives of the state.

This book constitutes the refereed proceedings of the 8th International Conference on Evolutionary Multi-Criterion Optimization, EMO 2015 held in Guimarães, Portugal in March/April 2015. The 68 revised full papers presented together with 4 plenary talks were carefully reviewed and selected from 90 submissions. The EMO 2015 aims to continue these type of developments, being the papers presented focused in: theoretical aspects, algorithms development, many-objectives optimization, robustness and optimization under uncertainty, performance indicators, multiple criteria decision making and real-world applications.

The second edition of Sustainable Business prepares future business leaders to tackle the most crucial social and environmental issues of our time. This engaging textbook provides students with a comprehensive, balanced introduction to integrating sustainable business policies into all core business functions and processes. The text employs a qualitative-based learning process to help students understand how leadership, finance, accounting, risk management, marketing, supply chain management, and operations can be adapted to meet the sustainability goals of the 21st century. Looking at sustainable business from the managerial viewpoint, the fully-updated new edition explains how and why business is evolving due to increased consumer and regulatory pressure for sustainable performance. Business topics are first introduced in the same manner as traditional MBA programs, and then examined through the lens of sustainability. The text incorporates real-life examples of social and environmental leadership to demonstrate the efficacy of good sustainable business decisions, and illustrates the negative ramifications of outdated, purely economic-driven managerial decision-making. Influential concepts based on interdisciplinary research in sustainability are discussed in detail, and practical insights address how to turn policy into practice in the workplace.

This book covers the complete syllabi prescribed for undergraduate courses in electrical, electronics, mechanical and instrumentation engineering offered by various Indian universities. The objective of this text is to provide thorough knowledge in the emerging field of special electrical machines. It discusses the stepper motor, switched reluctance motor, permanent magnet dc and ac motors, brushless dc motors, single phase special electric motors, servomotors, linear electric machines and permanent magnet axial flux machines. Key Features • Chapter on permanent magnet axial flux machines (not available in other Indian authors' books) • Numerous worked-out examples • Based on classroom tested materials • Simplified mathematical analysis Besides undergraduate students, the book will also be useful to the postgraduate students specialising in drives and control, power electronics, control systems and mechatronics.

History is written by the winners—and the powerful—but how much of it is fiction? And who is really in control today? From the dawn of civilization to the 21st century, from ancient aliens to the New World Order, *Secret History: Conspiracies from Ancient Aliens to the New World Order* examines, explores, and uncovers the hidden, overlooked, and buried history of mankind. The book moves from biblical, Egyptian, Mayan, Greek, and early mysteries of antiquity to the clandestine doings of the Nazis and the Masons and assassination plots of the more recent past to the surveillance, monitoring, mind-control, and secret schemes of today. Researcher Nick Redfern investigates the stories, mythologies, lore behind incredible events and clandestine groups of yesterday and today. More than 60 entries dig deep into the manipulation of events by influential groups, including ... • Historical riddles—alien visitations, space gods, and human–alien crossbreeding. • Government cover ups—mind control, murders, scientists, and secret agents. • Powerful groups and intended consequences—9-11, new world order, bird-flu, and chemtrails. Tracing the chilling and lasting effects of conspiracies, cabals, and plots, *Secret History: Conspiracies from Ancient Aliens to the New World Order* exposes their deep reach in shaping today's world.

This book takes a holistic approach to reliability engineering for electrical and electronic systems by looking at the failure mechanisms, testing methods, failure analysis, characterisation techniques and prediction models that can be used to increase reliability for a range of devices. The text describes the reliability behavior of electrical and electronic systems. It takes an empirical scientific approach to reliability engineering to facilitate a greater understanding of operating conditions, failure mechanisms and the need for testing for a more realistic characterisation. After introducing the fundamentals and background to reliability theory, the text moves on to describe the methods of reliability analysis and characterisation across a wide range of applications. Takes a holistic approach to reliability engineering Looks at the failure mechanisms, testing methods, failure analysis, characterisation techniques and prediction models that can be used to increase reliability Facilitates a greater understanding of operating conditions, failure mechanisms and the need for testing for a more realistic characterisation

Two of Japan's leading economists - Motoshige Itoh and Takashi Negishi - look at trade models in a disequilibrium context. Twenty-five years of human effort have failed even to slow climate change, let alone reverse it. Climate Insurgency lays out a strategy for protecting the earth's climate: a global nonviolent constitutional insurgency. This short book starts with a brief history of official climate protection efforts "from above" and non-governmental ones "from below" that explains why climate protection has failed so far. Then, it proposes a global nonviolent insurgency for climate protection to overcome that failure. Historian and longtime activist Jeremy Brecher presents a public trust doctrine that can legitimate global climate insurgency in national and international law. He shows how to make national economies climate-safe and points the way toward justly distributing the global costs and benefits of climate protection. In addition, he lays out a new strategy to make governments and economies meet their obligations to protect the climate.

What does successful adaptation look like? This is a question we are frequently asked by planners, policy makers and other professionals charged with the task of developing and implementing adaptation strategies. While adaptation is increasingly recognized as an important climate risk management strategy, and on-the-ground adaptation planning activity is becoming more common-place, there is no clear guidance as to what success would look like, what to aim for and how to judge progress. This edited volume makes significant progress toward unpacking the question of successful adaptation, offering both scientifically informed and practice-relevant answers from various sectors and regions of the world. It brings together 18 chapters from leading experts within the field to present careful analyses of different cases and situations, questioning throughout commonly avowed truisms and unspoken assumptions that have pervaded climate adaptation science and practice to date. This book offers not one answer but demonstrates how the question of success in important ways is normative and context specific. It identifies the various dimensions of success, such as economic, political, institutional, ecological, and social, explores the tensions between them, and compiles encouraging evidence that resolutions can be found. The book appraises how climatic and non-climatic stressors play a role, what role science does and can play in adaptation decision making, and how trade-offs and other concerns and priorities shape adaptation planning and implementation on the ground. This is timely interdisciplinary text sheds light on key issues that arise in on-the-ground adaptation to climate change. It bridges the gap between science and practical application of

successful adaptation strategies and will be of interest to both students, academics and practitioners.

Both law and economics and intellectual property law have expanded dramatically in tandem over recent decades. This field-defining two-volume Handbook, featuring the leading legal, empirical, and law and economics scholars studying intellectual property rights, provides wide-ranging and in-depth analysis both of the economic theory underpinning intellectual property law, and the use of analytical methods to study it.

Almost all technical systems currently either interface with or are themselves largely software systems. Software systems must not harm their environment, but are also often vulnerable to security attacks with potentially serious economic, political, and physical consequences, so a better understanding of security and safety and improving the quality of complex software systems are crucial challenges for the functioning of society. This book presents lectures from the 2018 Marktoberdorf summer school Engineering Secure and Dependable Software Systems, an Advanced Study Institute of the NATO Science for Peace and Security Programme. The lectures give an overview of the state of the art in the construction and analysis of safe and secure systems. Starting from the logical and semantic foundations that enable reasoning about classical software systems, they extend to the development and verification of cyber-physical systems, which combine computational and physical components and have become pervasive in aerospace, automotive, industry automation, and consumer appliances. Safety and security have traditionally been considered separate topics, but several lectures in this summer school emphasize their commonalities and present analysis and construction techniques that apply to both. The book will be of interest to all those working in the field of software systems, and cyber-physical systems in particular.

Featuring a diverse and impressive array of authors, this volume is the most comprehensive textbook available for all interested in international organization and global governance. Organized around a concern with how the world is and could be governed, the book offers: in-depth and accessible coverage of the history and theories of international organization and global governance; discussions of the full range of state, intergovernmental, and nonstate actors; and examinations of key issues in all aspects of contemporary global governance. The book's 50 chapters are arranged into 7 parts and woven together by a comprehensive introduction to the field, separate section introductions designed to guide students and faculty, and helpful pointers to further reading. International Organization and Global Governance is a self-contained resource enabling readers to better comprehend the role of myriad actors in the governance of global life as well as to assemble the many pieces of the contemporary global governance puzzle.

This economic and technical history of the early American bicycle industry focuses on the crucial period from 1876 to the beginning of World War I. It looks particularly at the life and career of the industry's most significant personality during

this era, Albert Augustus Pope. After becoming enamored with English high-wheeled bicycles during a visit to the Philadelphia World's Fair in 1876, Pope soon started paying Hartford, Connecticut's Weed Sewing Machine Company to make his own brand of high-wheeler, the "Columbia," the first to be manufactured in America in significant numbers. A decade later, Pope bought out that company, and ten years after that, Hartford's Park River was lined with five of Pope's factories. This book tells the story of the Pope Manufacturing Company's meteoric rise and fall and the growth of an industry around it.

Global Marketing provides students with a truly international treatment of the key principles that every marketing manager should grasp. International markets present different challenges that require a marketer to think strategically, and apply tools and techniques creatively in order to respond decisively in a fiercely competitive environment. Alon et al. provide students with everything they need to rise to the challenge: Coverage of small and medium enterprises, as well as multinational corporations, where much of the growth in international trade and global marketing has occurred. A shift toward greater consideration of services marketing as more companies move away from manufacturing. A focus on emerging markets to equip students with the skills necessary to take advantage of the opportunities that these rapidly growing regions present. Chapters on social media, innovation, and technology teach students how to incorporate these new tools into their marketing strategy. New material on sustainability, ethics, and corporate social responsibility; key values for any modern business. Short cases and examples throughout the text show students how these principles and techniques are applied in the real world. Longer cases provide instructors and students with rich content for deeper analysis and discussion. Covering key topics not found in competing books, Global Marketing will equip students with the knowledge and confidence they need to become leading marketing managers. A companion website features an instructor's manual with test questions, as well as additional exercises and examples for in-class use.

This book addresses the theme of collective bargaining in different legal systems and explores legal framework of collective bargaining as well as the role of different bargaining models in domestic labour law systems in altogether twenty-one jurisdictions throughout the world. Recent development of collective bargaining regimes can be viewed as part of a larger development of labour law models that face increasing challenges caused by globalization and transition of work and workplaces. The book places particular emphasis on identifying and examining most important development trends affecting domestic labour law regimes and collective bargaining and regulatory responses thereto. The analysis offered extents to transnational dimension of collective bargaining. As the chapters analyse the influence of the legal frameworks of collective bargaining in different countries they provide unique comparative insight into the topic which is central to understanding the function of labour law.

Following the catastrophic events of the 2008 global financial crisis, an anonymous hacker released Bitcoin to claw back power from commercial and central banks. It quickly garnered an enthusiastic following who sought to forge a stable and democratic global economy--a world free from hierarchy and control. In their eyes, Bitcoin's underlying architecture, blockchain, hailed the dawn of decentralisation. Money Code Space shatters these emancipatory claims. In their place, Jack Parkin constructs a new framework for revealing the geographies of power that lie behind blockchain networks. Drawing on first-hand experience in cryptocurrency communities and start-up companies from Silicon Valley to London, Parkin untangles the complex web of culture, politics, and economics that truly drive decentralisation.
