This text provides an overview of key principles relating to mechanical, spatial and abstract thought. The aim is to facilitate the following learning outcomes. + Identify individual elements within a group of elements; + Identify a rule connecting a set of figures; + Complete a number of test questions by applying a rule connecting a set of figures; + Apply techniques aimed at increasing the speed at which logical rules are generated (the faster a person generates solutions, the higher the probability of a correct answer—in a given period of time); + Increase the number of elements a person can keep track of in responding to an item (span capacity). Someone with a larger span capacity than someone else can take into account more figures without making errors and hence has a larger probability of a correct answer. Mechanical, Spatial and Abstract Reasoning ability is a key element in identifying aspects of person's general intelligence. That is why the vast majority of psychometric tests will have a component that relates to abstract and spatial reasoning. This ebook will provide a measure of eductive ability or fluid intelligence which is relatively independent of specific learning

acquired in a particular cultural or educational context.

This brand new, revised and expanded edition is aimed at all candidates planning to sit European institution competitions and who wish to prepare as effectively as possible for the abstract reasoning test. Abstract reasoning questions are presented as series of diagrams containing geometric shapes which are repeated or modified according to a logical sequence. Candidates have to identify the underlying logic and find the diagram that completes the series. Abstract reasoning tests call for skills that candidates do not normally use in everyday life: the ability to visualise geometric transformations (rotations, symmetries, etc), an aptitude to spot similarities between complex shapes, etc. We are all capable of developing these skills. It is not a question of intelligence, but of learning. Entry competitions for European institutions are highly selective.
