

## Ajcc Cancer Staging Manual 7th Edition

In the model of the popular AJCC Staging manual and AJCC Staging handbook with the EZTNM module, this new product combines the AJCC Staging Atlas with a CD containing all the illustrations from the Atlas. Having the figures from the Atlas available as PowerPoint® slides means that users can document the "why" and "how" of their staging decisions. Users can also import figures into presentations for tumor boards, grand rounds, presentations, and journal articles/book chapters.

Knowledge in the field of urologic pathology is growing at an explosive pace. Today's pathologists, specialists, and residents require a comprehensive and authoritative text that examines the full range of urological diseases and their diagnosis. Written by recognized leaders and educators in the field, the text provides readers with a detailed understanding of all diagnostic aspects of urological disease. Inside this unique resource, readers will explore a broad spectrum of practical information—including etiology, diagnostic criteria, molecular markers, differential diagnosis, ancillary tests, and clinical management. This is sure to be the new definitive text for urological pathology!

Significantly expanded, expertly and beautifully illustrated, The AJCC Cancer Staging Atlas, 2nd Edition, offers more than 600 illustrations created exclusively for this new edition and is fully updated to reflect the concepts discussed in the 7th Edition of both the AJCC Cancer Staging Manual and its companion Handbook. This Atlas illustrates the TNM classifications of all cancer sites and types included in the 7th Edition of the Manual and visually conceptualizes the TNM classifications and stage groupings. Specifically designed for simplicity and precision, the drawings have been verified through multi-disciplinary review to ensure accuracy and relevancy for clinical use. Every illustration provides detailed anatomic depictions to clarify critical structures and to allow the reader to instantly visualize the progressive extent of malignant disease. In addition, nodal maps are included for each site, appropriate labeling has been incorporated to identify significant anatomic structures, and each illustration is accompanied by an explanatory legend. The AJCC Cancer Staging Atlas, 2nd Edition, is an official publication of the American Joint Committee on Cancer, the recognized international leader in state-of-the-art information on cancer staging. This Atlas has been created as a companion to the updated 7th Edition of the AJCC Cancer Staging Manual, which continues to disseminate the importance of anatomical and pathological staging in the management of cancer. This state-of-the-art, invaluable 2nd Edition includes a CD containing PowerPoint slides of all illustrations, additional color, and a user-friendly, easy-to-read layout. The AJCC Cancer Staging Atlas, 2nd Edition will serve as an indispensable reference for clinicians, registrars, students, trainees, and patients.

Confronted with myriads of Ts, N's and M's in the VICC TNM booklet, classifying a malignancy may seem to many cancer clinicians a tedious, dull and pedantic task. But then when he looks into the TNM-Atlas all of a sudden lifeless categories become vivid images, challenging his know-how and his investigational skills. Prof. Dr. Brigit van der Werf-Messing, Chairman of the International TNM-Committee of the VICC. Preface In 1938 the League of Nations Health Organization published an "Atlas illustrating the division of cancer of the uterine cervix into four stages according to the anatomo-clinical extent of the growth". Since this work appeared, the idea of visual representation of the anatomical extent of malignant tumours at the different stages of their development has been repeatedly discussed. At its meeting in Copenhagen in July 1954, the VICC adopted as part of its programme "the realization of a clinical atlas". However, the time to do the planned illustration work was not ripe until the National Committees and international organizations had officially recognized the 28 classifications of malignant tumours at various sites as presented in the 3rd edition of the "TNM Booklet" (1978) edited by M. Harmer. This was all the more important since in 1980, in addition to the

"Booklet", a "Brochure of Checklists" edited by A.H. Sellers was made available as a further aid in the practical application of the TNMsystem.

M. K. Gospodarowicz, P. Hermanek, and D. E. Henson Attention to innovations in cancer treatment has tended to eclipse the importance of prognostic assessment. However, the recognition that prognostic factors often have a greater impact on outcome than available therapies and the proliferation of biochemical, molecular, and genetic markers have resulted in renewed interest in this field. The outcome in patients with cancer is determined by a combination of numerous factors. Presently, the most widely recognized are the extent of disease, histologic type of tumor, and treatment. It has been known for some time that additional factors also influence outcome. These include histologic grade, lymphatic or vascular invasion, mitotic index, performance status, symptoms, and most recently genetic and biochemical markers. It is the aim of this volume to compile those prognostic factors that have emerged as important determinants of outcome for tumors at various sites. This compilation represents the first phase of a more extensive process to integrate all prognostic factors in cancer to further enhance the prediction of outcome following treatment. Certain issues surrounding the assessment and reporting of prognostic factors are also considered.

**Importance of Prognostic Factors** Prognostic factors in cancer often have an immense influence on outcome, while treatment often has a much weaker effect. For example, the influence of the presence of lymph node involvement on survival of patients with metastatic breast cancer is much greater than the effect of adjuvant treatment with tamoxifen in the same group of patients [5].

An intuitive, ingenious and powerful technique, sentinel lymph node biopsy has entered clinical practice with astonishing rapidity and now represents a new standard of care for melanoma and breast cancer patients, while showing great promise for the treatment of urologic, colorectal, gynecologic, and head and neck cancers. This text, written by international experts in the technique, provides a clear and comprehensive guide, presenting a detailed overview and discussing the various mapping techniques available and how these are applied in a number of leading institutions. This essential resource for surgical oncologists, pathologists, and specialists in nuclear medicine will also provide key information for those planning to start a sentinel lymph node program.

The TNM System is the most widely used classification of the extent of local growth and regional and distant spread of cancer. The 1992 revision of the fourth edition agreed upon by all national TNM committees, includes: changes made by FIGO in 1989/1990; an updated classification of urological tumours; and new classifications of small intestine carcinoma and pleural mesothelioma. In addition, ICD-O codes have been updated according to the 1990 second edition.

Gastrointestinal Oncology is an evidence-based, practical reference intended to assist in the diagnosis and management of patients with gastrointestinal malignancies. It is designed to be as user friendly as possible and is distinguished by the extremely practical, concrete nature of the information presented and by the multidisciplinary approach adopted. In addition to disease-oriented chapters spanning sites from the esophagus to the anus, non-anatomic subjects such as modern imaging techniques are also addressed. Translational science is supplied where useful in the decision-making process. All of the authors are internationally recognized experts. This book is an ideal resource for oncologists, surgeons, gastroenterologists, and primary-care providers looking for the latest and best information on how to deal with a wide variety of gastrointestinal neoplasms.

Used by physicians and health care professionals worldwide to facilitate the uniform description of neoplastic diseases, the fully revised and updated Seventh Edition of the AJCC Cancer Staging Handbook brings together all currently available information on staging of cancer at various anatomic sites and incorporates newly acquired knowledge

on the etiology and pathology of cancer.

Colorectal cancer (CRC) is a major health problem because it represents around 10% of all cancers and achieves a worldwide estimate of 1.4 million newly diagnosed cases annually, resulting in approximately 700,000 deaths. Approximately 19-31% of patients present liver metastases. At diagnosis, a further 23-38% will develop extra-hepatic disease. Over the past decade, the widespread use of modern chemotherapeutic and biological agents, combined with laparoscopic surgical techniques, has improved the prognosis of metastatic CRC. A better understanding of the biology of the tumor, along with high efficiency of diagnostic and therapeutic methods, as well as the spread of screening programs, will improve the survival of the CRC patients in the near future.

This edition of ICD-O, the standard tool for coding diagnoses of neoplasms in tumour and cancer registrars and in pathology laboratories, has been developed by a working party convened by the International Agency for Research on Cancer / WHO. ICD-O is a dual classification with coding systems for both topography and morphology. The book has five main sections. The first provides general instructions for using the coding systems and gives rules for their implementation in tumour registries and pathology laboratories. Section two includes the numerical list of topography codes, which remain unchanged from the previous edition. The numerical list of morphology codes is presented in the next section, which introduces several new terms and includes considerable revisions of the non-Hodgkin lymphoma and leukaemia sections, based on the WHO Classification of Hematopoietic and Lymphoid Diseases. The five-digit morphology codes allow identification of a tumour or cell type by histology, behaviour, and grade. Revisions in the morphology section were made in consultation with a large number of experts and were finalised after field-testing in cancer registries around the world. The alphabetical index gives codes for both topography and morphology and includes selected tumour-like lesions and conditions. A guide to differences in morphology codes between the second and third editions is provided in the final section, which includes lists of all new code numbers, new terms and synonyms added to existing code definitions, terms that changed morphology code, terms for conditions now considered malignant, deleted terms, and terms that changed behaviour code.

Building on the success of this book's first edition, Dr. Eric Hansen and Dr. Mack Roach have updated, revised, and expanded the Handbook of Evidence-based Radiation Oncology, a portable reference that utilizes evidence-based medicine as the basis for practical treatment recommendations and guidelines. Organized by body site, concise clinical chapters provide easy access to critical information. Important "pearls" of epidemiology, anatomy, pathology, and clinical presentation are highlighted. Key facets of the work-up are listed, followed by staging and/or risk classification systems.

Treatment recommendations are discussed based on stage, histology, and/or risk classification. Brief summaries of key trials and studies provide rationale for the recommendations. Practical guidelines for radiation techniques are described. Finally, complications and follow-up guidelines are outlined. Updates from the first edition include brand new color figures and color contouring mini-atlases for head and neck, gastrointestinal, prostate, and gynecological tumors; redesigned tables for increased readability; new chapters on management of the neck and unknown primary, clinical radiobiology, and pediatric malignancies and benign conditions; and new appendices including the American College of Radiology guidelines for administration of IV contrast.

This book highlights the unique aspects of oncologic ophthalmology as a medical and surgical discipline practiced at a comprehensive cancer center. Multi-disciplinary management of ocular, orbital and adnexal cancers are highlighted using simple and tried-and-true algorithms. In addition, ocular problems caused as a direct result of cancer treatment are reviewed using illustrative photographs and case presentations. The content is provided by full-time ophthalmology faculty and fellows at M. D. Anderson Cancer Center. Experts in complementary disciplines such as ophthalmic pathology, dermatopathology, radiation oncology, radiology, and other surgical subspecialties have brought their unique perspective to each chapter. The book is abundant with clinical photographs as well as interesting case presentations that will help the clinician correctly diagnose cancers of the orbit, eye, and adnexal structures, initiate appropriate management, as well as recognize and treat common ocular complications of cancer therapy.

TNM Classification of Malignant Tumours, 7th Edition provides the latest, internationally agreed-upon standards to describe and categorize cancer stages and progression. Published in affiliation with the International Union Against Cancer (UICC), this authoritative guide contains important updated organ-specific classifications that oncologists and other professionals who manage patients with cancer need to accurately classify tumours for staging, prognosis and treatment. The major alterations addressed in the 7th Edition concern carcinomas of the oesophagus and the gastroesophageal junction, stomach, lung, appendix, biliary tract, skin, and prostate. In addition, there are several entirely new classifications: gastrointestinal carcinoids (neuroendocrine tumours) gastrointestinal stromal tumour upper aerodigestive mucosal melanoma Merkel cell carcinoma uterine sarcomas intrahepatic cholangiocarcinoma adrenal cortical carcinoma. A new approach has also been adopted to separate anatomical stage groupings from prognostic groupings in which other prognostic factors are added to T, N, and M categories. These new prognostic groupings, as well as the traditional anatomical groupings, are presented for oesophageal and prostate carcinomas. Visit [www.wileyanducc.com](http://www.wileyanducc.com) for more information about the International Journal of Cancer and our other UICC book titles

"The WHO Classification of Tumours of the Digestive System presented in this book reflects the views of a Working Group that convened for an Editorial and Consensus Conference at the International Agency for Research on Cancer (IARC), Lyon, December 10-12, 2009"--P. [5].

This comprehensive, multidisciplinary text addresses all aspects of head and neck cancer and represents a wide spectrum of specialists, including surgical, radiation, and medical oncologists, dentists, pathologists, radiologists, and nurses. The book focuses on a two-part approach to treatment that maximizes the chance for a cure while maintaining a strong emphasis on quality of life. This Third Edition's updated techniques section includes new radiation techniques such as IMRT and IGRT and new endoscopic and laser surgical techniques. Other highlights include a new chapter on reconstructive techniques; significant updates to all site-specific chapters; updates on chemoprevention and molecular targeting; and discussions of new imaging modalities such as fused PET/CT. A companion Website will offer the fully searchable text with all images.

The Union for International Cancer Control's (UICC) TNM classification system is the

most widely used cancer classification and staging system in the world. It is used to describe the anatomical extent of disease and it is essential to patient care, research and cancer control. This fifth edition of the TNM Supplement: A Commentary of Uniform Use offers practitioners a wealth of material intended to complement the system's day-to-day use. The volume features: Updated definitions of terms used in cancer staging. New sections on carcinomas of the thymus, sarcomas of the spine and pelvis and soft tissue sarcomas of the head and neck, and comprehensive updates to the head and neck carcinomas, carcinomas of the lung and neuroendocrine tumours sections. Frequently asked questions from the UICC helpdesk. The Supplement may be treated as a companion text to the recent eighth edition of the TNM Classification of Malignant Tumours (978-1-119-26357-9), supporting the correct and uniform application of the TNM classification system. The TNM Supplement can also be utilised as a standalone book, providing explanations and examples to answer many questions that arise during the daily use of the TNM cancer classification and staging system, particularly in unusual cases.

Written by the leading melanoma experts from the United States, Australia, and Europe, this new edition incorporates the clinical outcomes of more than 70,000 patients treated at major melanoma centers throughout the world and is the definitive and most authoritative textbook on melanoma used worldwide. Providing the most up-to-date and comprehensive information needed for the clinical management and scientific study of melanoma, Cutaneous Melanoma, 6th edition covers everything from precursors of melanoma to advanced stages of metastatic disease.

This book provides a comprehensive, state-of-the art review of this field, and will serve as a valuable resource for clinicians and researchers with an interest in the management of thyroid nodules and cancer, including both surgeons and endocrinologists. The book reviews new data about risk factors for nodular disease and cancer, details the management of toxic and non-toxic benign thyroid nodular disease, discusses controversies in the management of indeterminate thyroid nodules and cancer, and reviews the latest data on use of molecular testing for diagnosis and prognosis. Lastly, the book reviews the management of difficult-to-treat thyroid cancers. Management of Thyroid Nodules and Differentiated Thyroid Cancer: A Practical Guide will serve as a useful resource for physicians and researchers dealing with, and interested in thyroid nodular disease and cancer. It will provide a concise yet comprehensive summary of the current status of the field that will help guide patient management and stimulate investigative efforts. All chapters are written by experts in their fields and include the most up to date scientific and clinical information.

A valuable resource for all oncology practice settings that focuses on nursing diagnoses for specific cancers and oncologic emergencies, with the emphasis on the nursing interventions and supportive rationales for each problem.

Among malignant tumors, adenocarcinomas of the esophagogastric junction show the highest increase in incidence over the past three decades in Western industrialized countries. This special volume, with contributions from experts in the field, covers all aspects of the disease. Etiology, pathogenesis, classification, and clinical staging are discussed, and there is special emphasis on state of the art treatment techniques. The latter range from endoscopic mucosal resections or limited surgical resections for early cancers to multimodality treatment options for locally advanced tumors. Emerging

quality issues in surgical management are addressed. Detailed attention is also paid to other important recent developments, including molecular response prediction, early metabolic response evaluation by PET and PET-CT, the diagnosis of micrometastases, and the use of sentinel node technology. This volume will be of interest to all clinicians concerned with the diagnosis and management of this malignancy.

This book presents the illustrated version of the TNM Classification of Malignant Tumours, Seventh Edition, promoting the uniform application of the TNM classification in cancer practice. Now featuring beautiful, useful full-color medical artwork, this book is designed as an aid for the practical application of the TNM classification system by illustrating the T and N categories in clear, easily understood graphics. The aim of this presentation is twofold: to reach a more standardized understanding and documentation of the anatomic spread of tumours, and to further enhance the dissemination and use of the TNM classification.

The AJCC Cancer Staging Manual is used by physicians and health care professionals throughout the world to facilitate the uniform description and reporting of neoplastic diseases. Proper classification and staging of cancer is essential for the physician to assign proper treatment, evaluate results of management and clinical trials, and to serve as the standard for local, regional and international reporting on cancer incidence and outcome. Significantly expanded and developed by international disease site expert panels, the Eighth Edition AJCC Cancer Staging Manual brings together all the currently available knowledge on staging of cancer at various anatomic sites. In this edition, evidence-based TNM staging is supplemented, as appropriate, by selected molecular markers and newly acquired insights into the molecular underpinnings of cancer. This edition features 12 entirely new staging systems, a wide range of changed or new staging definitions, and a refined emphasis on a personalized-medicine approach. To enhance the print and electronic usability of the cancer staging forms, they are now available exclusively for access and downloading at [www.cancerstaging.org](http://www.cancerstaging.org). The Eighth Edition AJCC Cancer Staging Manual remains the gold standard reference for oncologists, surgeons, pathologists, radiologists, cancer registrars and medical professionals world-wide to ensure that all those caring for cancer patients are fully versed in the language of cancer staging.

The ultimate preparation tool for the American Board of Surgery In-Training Examination ABSITE Slayer is a rigorous, high-yield review that focuses specifically on the American Board of Surgery In-Training Examination. Designed to reduce pre-test anxiety and help you achieve the highest score possible, this powerful study aid provides a complete framework for your exam preparation and is also the most efficient last-minute review available. You will find everything you need to ace the exam in one comprehensive package--from Q&A and full-color illustrations to "make or break" tips--from expert authors who know exactly what it takes to excel. Here's why this is the best ABSITE review: More than 300 multiple-choice questions and more than 1,000 quick-hit single answer questions Test-taking tips that may spell the difference between success and failure on the exam Numerous full-color illustrations of must-know anatomy Valuable clinical pearls Easy-to-retain concise text Logical organ-based organization, that also includes chapters on pharmacology, anesthesia, cell biology, and fluids/electrolytes/nutrition

Orbital Tumors, 2nd edition discusses advances in orbital disease and their treatment,

offering readers an up-to-date, single volume reference for orbital tumors. Divided into two parts, this book covers everything from advances in oncogenesis and its relationship to orbital tumors, to medical genetics and the role of imaging in diagnosis of orbital tumors. Additionally, new information on incidence and behavior of tumors resulting from environmental and social trends is included. Written and edited by leaders in the fields of ophthalmology and oncology, *Orbital Tumors*, 2nd edition builds upon the first edition, proving to be a useful reference for orbital specialists and of significant interest for everyone dealing with orbital pathology from a clinical and scientific point of view.

Despite recent advances in adjuvant therapies of cancer, the regimens of postoperative adjuvant chemotherapy treatment which are presently available fail to cure the majority of cancer patients. Preoperative (neoadjuvant) chemotherapy represents a new approach in drug scheduling, based on sound theoretical, pharmacokinetic, and experimental principles. The preoperative timing of chemotherapy before definitive surgery is not a minor change in the therapy of cancer. To be successful, large numbers of practitioners and their patients must participate.

Substantial alterations of many aspects of the present management of cancer will have to follow. Therefore, before such therapy can be fully and routinely implemented, results of the novel treatment and its rationale have to be carefully evaluated. In preoperative treatment, other features will likely gain importance. For the first time, clinicians have a chance to follow the in vivo response of the tumor exposed to preoperative chemotherapy. The subsequent histological assessment of the tumor sample may likely become an important prognostic guide, permitting more refined individual approaches to the planning of postoperative adjuvant treatment. The value of such a treatment strategy can already be appreciated in the clinical setting, as seen from the therapy of osteosarcoma. Furthermore, preoperative chemotherapy might render previously inoperable tumors operable and hence resectable with a curative intention. The preoperative reduction of tumor bulk may also effectively decrease the need for more radical operations, permitting a more uniform adoption of conservative surgery.

Written by internationally renowned experts, *Clinical Ophthalmic Oncology* provides practical guidance and advice on the diagnosis and management of the complete range of ocular cancers. The book supplies all of the state-of-the-art knowledge required in order to identify these cancers early and to treat them as effectively as possible. Using the information provided, readers will be able to provide effective patient care using the latest knowledge on all aspects of ophthalmic oncology, to verify diagnostic conclusions based on comparison with numerous full-color clinical photographs, and to locate required information quickly owing to the clinically focused and user-friendly format. This volume, devoted solely to uveal tumors, explains the various diagnostic and biopsy techniques that may be used and describes the therapeutic options of potential value for different types of tumor.

Head and neck squamous cell carcinoma (HNSCC), the sixth most prevalent cancer worldwide, remains a very difficult disease to treat and cure despite intensive investigation into molecular etiologies and tumor progression pathways. Due to public health efforts encouraging smoking cessation, the overall incidence of HNSCC has decreased in recent years in many countries. In contrast, the incidence of oropharyngeal squamous cell carcinoma (OPSCC) has increased significantly, and this

subtype of HNSCC is commonly associated with human papillomavirus (HPV) infection. Moreover, individuals with HPV-positive OPSCC are generally younger and are frequently non-smokers, suggesting that HPV-associated OPSCC represents a distinct biologic entity. This volume summarizes the spectrum of current HPV-associated OPSCC research from the fundamental basic science to translational surgery and treatment approaches. Chapters are contributed by authoritative leaders in the fields of research and clinical care. Initial chapters address epidemiology, behavioral correlates of HPV infection, and racial disparities in oropharyngeal cancer. This is followed by chapters detailing HPV virology with focus on viral transformation, viral replication, and host response to viral infection. The molecular biology of HPV-associated OPSCC is investigated in chapters detailing alterations in signaling networks and unique mutational profiles of human tumors. Clinical presentation, surgical perspectives, and treatment paradigms specific to HPV-associated OPSCC conclude the volume. This comprehensive volume provides an up-to-date overview of both scientific discovery and clinical management of this emerging public health problem.

This is a single, comprehensive handbook for clinical oncology trainees and consultants, covering the basic aspects of stereotactic radiotherapy systems and treatment.

The American Joint Committee on Cancer's Cancer Staging Manual is used by physicians throughout the world to diagnose cancer and determine the extent to which cancer has progressed. All of the TNM staging information included in this Sixth Edition is uniform between the AJCC (American Joint Committee on Cancer) and the UICC (International Union Against Cancer). In addition to the information found in the Handbook, the Manual provides standardized data forms for each anatomic site, which can be utilized as permanent patient records, enabling clinicians and cancer research scientists to maintain consistency in evaluating the efficacy of diagnosis and treatment. The CD-ROM packaged with each Manual contains printable copies of each of the book's 45 Staging Forms.

AJCC Cancer Staging Handbook From the AJCC Cancer Staging Manual Springer  
The profession of radiation oncology remains one of the most complex medical subspecialties, which requires an integrated understanding of radiation physics and technical aspects of radiation treatment planning and delivery; cancer and radiation biology; and, most importantly, the clinical oncology. Moreover, the profession continues to undergo revolutionary changes that require radiation oncologists to rapidly adopt and implement new clinical discoveries and technical innovations. The breadth of these changes can overwhelm busy practitioners, who struggle to keep abreast of the thousands of research articles and the number of changes in treatment techniques. To help with this, Hasan Murshed, M.D., M.S., has produced this text entitled, *Clinical Fundamentals for Radiation Oncologists*, which follows his acclaimed 2006 publication of *Clinical Fundamentals for Radiation Oncology Residents*. *Clinical Fundamentals for Radiation Oncologists* is a unique resource for busy radiation oncologists. First, it is a comprehensive text that includes review of the basic sciences underlying the field of radiation oncology, important overviews of the current state of knowledge for all common cancers managed by radiation oncologists, a concise overview of modern radiation treatment techniques, and discussion of palliative care and symptom management. In addition to this, another attractive feature about this book is its ease of

use. Information is laid out for efficient utilization, with bulleted key points and effective tabulation of relevant data. The annotated bibliography not only lists the most relevant current literature but also provides the reader a capsule summary of the most important results and clinical relevancy of these studies. The efficient presentation of such material will no doubt be very useful for radiation oncologists who have only minutes to prepare for an upcoming tumor board discussion. Radiation oncologists practice evidenc

The American Joint Committee on Cancer's Cancer Staging Handbook is used by physicians throughout the world to diagnose cancer and determine the extent to which cancer has progressed. All of the TNM staging information included in this Sixth Edition is uniform between the AJCC (American Joint Committee on Cancer) and the UICC (International Union Against Cancer). Organised by disease site into 48 comprehensive chapters, this new edition has completely revised and updated the old classification system to provide a new, evidence-based guide to cancer staging. This new TNM Classification will be implemented world-wide on January 1st, 2003.

This multidisciplinary textbook is designed to be the standard on the subject and is geared for use by physicians who are involved in the care and/or diagnosis of cancer patients. Comprehensive coverage is provided on all aspects of radioguided surgery. Practical information is readily accessible and throughout there is an emphasis on improved decision making. Tables present the indications, performance, and interpretation of procedures at a glance. A wealth of illustrations, including a full-color insert, enhances the application of new concepts.

This book is a cutting-edge resource that provides clinicians with the up-to-date practical knowledge required in order to manage SCC patients optimally. It summarizes newly available information relating to the definition of high-risk SCC, its pathophysiologic underpinnings, and its management. New prognostic information and staging systems are summarized that enable high-risk tumors to be defined more precisely than ever before. Many helpful tips are provided on the practical management of challenging cases, including multiple tumors/field cancerization, high-risk tumors, nodal metastases, and unresectable disease. The authors are all acknowledged experts in the emerging field of high-risk and advanced SCC.?

From the Surveill., Epidem., & End Results (SEER) Prog. based at the Nat. Cancer Inst. Intended as a coding manual beginning with cases diagnosed from Jan. 1, 2001 rather than a staging guide. Each anatomic site in the Topography Sect. of the Internat. Class. of Disease for Oncology -- 3rd Ed. (ICD-0-3) has a corresponding summary staging scheme. Certain specific histologic types also have specific staging schemes. In some cases, sites which previously had separate guides (such as the segments of the colon) have a single staging scheme (colon), whereas some sites which previously had a single guide (e.g., larynx) have separate schemes for each sub-site of the larynx.

Focusing on recent developments in the understanding and treatment of colorectal cancer, this detailed reference covers all aspects of the disease, with contributions from a strong international team of authors. \* Includes chapters on genetics and molecular pathology \* Provides a comprehensive overview of current and developing treatment strategies \* Covers preoperative treatment and surgery, chemotherapy, biological therapies, and much more
