Hydraulics and Fluid Mechanics is a collection of papers from the Proceedings of the First Australian Conference held at the University of Western Australia on December 6-13, 1962 at Nedlands, Australia. This book deals with the science of hydraulics and fluid mechanics in their practical uses in industry and research. In special situations when high-pressure oil is used in mechanical equipment, hydraulic lock is preferred for valve control. This book reviews the pressure drop in the pneumatic transfer of granular solids in a pipe where a formula is derived to determine the pressure drop when using either a straight or bent pipe. This text also discusses the improvements on the cavitation performance of flow pumps by using prerotation at design points. The construction of a dam in Tasmania provides another study on the behavior of rock-fill slopes subjected to seepage. Here, the book analyzes the hydraulic forces acting on the rock particles, and explains theories on the derivation of the dynamic equation for spatially varied flow with increasing discharge on a steep slope. The book also examines the concept of critical depth in spatially varied flow with increasing discharge on a steep slope. This book investigates the use of a computer model designed to determine

the methods of draining flooded farmlands either through hydraulically or electrically operated drainage systems. This text also evaluates the cost of constructing a project. This collection is suitable for people in the field of applied mathematics, physics, and engineering.

Walking his two young children to school every morning, Thad Carhart passes an unassuming little storefront in his Paris neighborhood. Intrigued by its simple sign—Desforges Pianos—he enters, only to have his way barred by the shop’s imperious owner. Unable to stifle his curiosity, he finally lands the proper introduction, and a world previously hidden is brought into view. Luc, the atelier’s master, proves an indispensable guide to the history and art of the piano. Intertwined with the story of a musical friendship are reflections on how pianos work, their glorious history, and stories of the people who care for them, from amateur pianists to the craftsmen who make the mechanism sing. The Piano Shop on the Left Bank is at once a beguiling portrait of a Paris not found on any map and a tender account of the awakening of a lost childhood passion. Praise for The Piano Shop on the Left Bank: “[Carhart’s] writing is fluid and lovely enough to lure the rustiest plunker back to the piano bench and the most jaded traveler back to Paris.” –San Francisco Chronicle

“Captivating . . . [Carhart] joins the tiny company of foreigners who have written of the French as verbs. . . . What he tries to capture is not the sight of them, but what they see.” –The New York Times

“Thoroughly engaging . . . In part it is a book about that most unpredictable and pleasurable of human experiences, serendipity. . . . The book is also about something more difficult to pin down, friendship and community.” –The Washington Post

“Carhart writes with a sensuousness enhanced by patience and grounded by the humble acquisition of new insight into music, his childhood, and his relationship to the city of Paris.” –The New Yorker

**NAMED ONE OF THE BEST BOOKS OF THE YEAR BY THE WASHINGTON POST BOOK WORLD**

Solved examples are given at the end of relevant subtopics to strengthen the concepts. The chapters conclude with a set of review and practice questions.

This thorough update of a well-established textbook covers a core subject taught on every civil engineering course. Now expanded to cover environmental hydraulics and engineering hydrology, it has been revised to reflect current practice and course requirements. As previous editions, it includes substantial worked example sections with an on-line solution manual. A strength of the book has always been in its presentation these exercises which has distinguished it from other books on hydraulics, by enabling students to test their understanding of the theory and of the methods of analysis and design. Civil Engineering Hydraulics provides a succinct introduction to the theory of civil engineering hydraulics, together with a large number of worked examples and exercise problems with answers. Each chapter includes a worked example section with solutions; a list of recommended reading; and exercise problems with answers to enable students to assess their understanding. The book will be invaluable throughout a student's entire course – but particularly for first and second year study, and will also be welcomed by practising engineers as a concise reference.

Talking cats, a missing princess, swordfights with villains, and secret identities combine in this epic tale of bravery and self-discovery on the high seas. Duncan is very smart. He also has a most unusual gift. So why does his mother encourage him to be perfectly average and insist he only get mediocre grades ? His special talent is the ability to talk to cats—but Duncan longs more than anything for academic success. When Duncan rebels and gets a perfect test score, people start taking notice of him. And it turns out that some of those people may not have the best intentions . . . not by a long shot.

Most of the papers in this volume were presented at the NATO Advanced Research Workshop High Performance Computing: Technology and Application, held in Cetraro, Italy from 24 to 26 of June, 1996. The main purpose of the Workshop was to discuss some key scientific and technological developments in high performance computing, identify significant trends and define desirable research objectives. The volume structure corresponds, in general, to the outline of the workshop technical agenda: general concepts and emerging systems, software technology, algorithms and applications. One of the Workshop innovations was an effort to extend slightly the scope of the meeting from scientific/engineering computing to enterprise-wide computing. The papers on performance and scalability of database servers, and Oracle DBMS reflect this attempt. We hope that after reading this collection of papers the readers will have a good idea about some important research and technological issues in high performance computing. We wish to give our thanks to the NATO Scientific and Environmental Affairs Division for being the principal sponsor for the Workshop. Also we are pleased to acknowledge other institutions and companies that supported the Workshop: European Union: European Commission DGIII-Industry, CNR: National Research Council of Italy, University of Calabria, Alenia Spazio, Centro Italiano Ricerche Aerospaziali, ENEA: Italian National Agency for New Technology, Energy and the Environment, Fujitsu, Hewlett Packard-Convex, Hitachi, NEC, Oracle, and Silicon Graphics-Cray Research.
