High voltage engineering is extremely important for the reliable design, safe manufacture and operation of electric devices, equipment and electric power systems. The 21st International Symposium on High Voltage Engineering, organized by the 90 years old Budapest School of High Voltage Engineering, provides an excellent forum to present results, advances and discussions among engineers, researchers and scientists, and share ideas, knowledge and expertise on high voltage engineering. The proceedings of the conference presents the state of the art technology of the field. The content is simultaneously aiming to help practicing engineers to be able to implement based on the papers and researchers to link and further develop ideas. Exchange-traded funds (ETFs) have become in their 25-year history one of the fastest growing segments of the investment management business. These funds provide liquid access to virtually every financial market and allow large and small investors to build institutional-caliber portfolios. Yet, their management fees are significantly lower than those typical of mutual funds. High levels of transparency in ETFs for holdings and investment strategy help investors evaluate an ETF's potential returns and risks. This book covers the evolution of ETFs as products and in their uses in investment strategies. It details how ETFs work, their unique investment and trading features, their regulatory structure, how they are used in tactical and strategic portfolio management in a broad range of asset classes, and how to evaluate them individually. Masters of Doom is the amazing true story of the Lennon and McCartney of video games: John Carmack and John Romero. Together, they ruled big business. They transformed popular culture. And they provoked a national controversy. More than anything, they lived a unique and rollicking American Dream, escaping the broken homes of their youth to co-create the most

notoriously successful game franchises in history—Doom and Quake—until the games they made tore them apart. Americans spend more money on video games than on movie tickets. Masters of Doom is the first book to chronicle this industry's greatest story, written by one of the medium's leading observers. David Kushner takes readers inside the rags-to-riches adventure of two rebellious entrepreneurs who came of age to shape a generation. The vivid portrait reveals why their games are so violent and why their immersion in their brilliantly designed fantasy worlds offered them solace. And it shows how they channeled their fury and imagination into products that are a formative influence on our culture, from MTV to the Internet to Columbine. This is a story of friendship and betrayal, commerce and artistry—a powerful and compassionate account of what it's like to be young, driven, and wildly creative. "To my taste, the greatest American myth of cosmogenesis features the maladjusted, antisocial, genius teenage boy who, in the insular laboratory of his own bedroom, invents the universe from scratch. Masters of Doom is a particularly inspired rendition. Dave Kushner chronicles the saga of video game virtuosi Carmack and Romero with terrific brio. This is a page-turning, mythopoeic cyber-soap opera about two glamorous geek geniuses—and it should be read while scarfing down pepperoni pizza and swilling Diet Coke, with Queens of the Stone Age cranked up all the way."—Mark Leyner, author of I Smell Esther Williams

" Scare headlines about the first human clones appear in our newspapers. Biotech companies brag about manufacturing human embryos as "products" for use in medical treatments. Events are moving so fast—and biotechnology seems so complicated—that many of us worry we can't keep up. But now, Wesley J. Smith provides us with a guide to the brave new world that is no longer a figment of our imagination, but a reality just around the corner of our lives. Smith unravels the mystery of stem cells and shows what's at stake in the controversy over using them for research. He describes the emerging science of human cloning—the most radical technology in history—and shows how it moves forward inexorably against the moral consensus of the world. But at the core of this highly readable and carefully researched book is a report on the gargantuan "Big Biotech" industry and its supporters in the universities and the science and bioethics establishments. Smith reveals how the lure of huge riches, mixed with the ideology of "scientism," threatens to impose on society a "new eugenics" that would dismantle ethical norms and call into question the uniqueness and importance of all human life. "At stake," he warns, "is whether science will continue to serve society, or instead dominate it." In Consumer's Guide to a Brave New World, Smith presents a clear-eyed vision of two potential futures. In one, we will use biotechnology as a powerful tool to treat disease and improve the quality of our lives. But in another, darker scenario, we will be steered onto the antihuman path that Aldous Huxley and other prophetic writers warned against half a century ago. "

"By turns alarming and encouraging…Manuel delineates with clarity [why] the US must attend closely to…harmonious future relations with China and India" (Kirkus Reviews) and why our obsession with China (as once with Japan) is shortsighted. In the next decade and a half, China and India will become two of the world's indispensable powers—whether they rise peacefully or not. During that time, Asia will surpass the combined strength of North America and Europe in economic might, population size, and military spending. Both India and China will have vetoes over many international decisions, from climate change to global trade, human rights, and business standards. From her front row view of this colossal shift, first at the State Department and now as an advisor to American business leaders, Anja Manuel escorts the reader on an intimate tour of the corridors of power in Delhi and Beijing. Her encounters with political and business leaders reveal how each country's history and politics influences their conduct today. Through vibrant stories, she reveals how each country is working to surmount enormous challenges—from the crushing poverty of Indian slum dwellers and Chinese factory workers, to outrageous corruption scandals, rotting rivers, unbreathable air, and managing their citizens' discontent. "Incisive…lively and accessible…Manual shows us that an optimistic path is possible: we can bring China and India along as partners" (San Francisco Chronicle). We wring our hands about China, Manuel writes, while we underestimate India, which will be the most important country outside the West to shape China's rise. Manuel shows us that a different path is possible—we can bring China and India along as partners rather than alienating one or both, and thus extend our own leadership in the world. This Brave New World offers "a thoughtful analysis…and a strategy for keeping it from turning violent" (The Wall Street Journal).

Information technology has had a profound effect on almost every aspect of our lives including the way we purchase products, communicate with others, receive health care services, and deliver education and training. It has also had a major impact on human resource management (HR) processes, and it has transformed the way that we recruit, select, motivate, and retain employees (Gueutal & Stone, 2005; Kavanagh, Thite, & Johnson, 2015). For example, some estimates indicated that 100 % of large organizations now use web-based recruiting (Sierra-Cedar, 2016-2017), and over half of the training conducted in America is delivered using technology-based methods (American Society for Training and Development, 2015). Results of a survey by the

Society for Human Resource Management (SHRM) (2002) revealed that technology is one of the major drivers of change in today's HR departments. In spite of the increased use of technology in the field of HR, relatively little research has examined the acceptance and effectiveness of electronic human resource management (eHRM) methods. As a consequence, practitioners are implementing these new systems without the benefit of research. Thus, the primary purpose of this issue is to review the results of research on a number of important eHRM practices including e-recruitment, e-selection, gamification, e- socialization, e-learning, and e-performance management. It also considers how technology can be used to manage task-based contingent workers, and examines the problems associated with cyberdeviance in organizations. The chapters in this series should be extremely beneficial for HR researchers and practitioners who are employing these new systems.

London continues to fascinate a vast audience across the world, and an extensive, diverse literature now exists describing and analyzing this metropolis. The central question - what is London? - has produced many answers but none of them, the author argues, uncovers the complex ways in which knowledge is constructed in the diverse attempts to represent places and people. On the contrary: a gulf has opened up between analysis of contemporary London as a global, postcolonial city, on the one hand, and historical accounts of the imperial capital on the other. The author shows how the gap can be bridged by combining an analysis of the representation over time by various experts of London and certain localities with an investigation of the ways in which residents have represented their communities through struggles over symbolic and material resources.

Resolutions provides, by far, the best, boldest, and most thorough account to date of video art and activism, practice, and theory. The long-awaited follow-up to a project conducted by Los Angeles Contemporary Exhibitions (LACE), this volume presents original articles by many of the most interesting video artists, filmmakers, and critical theorists writing today. Their subjects, from video pedagogy to emerging technologies, are many and varied and together constitute a clear and complete picture of the state of the

medium. Constructed like an inquiry into newly forming video practice, the collection at once interweaves and questions a series of relationships among politics, popular culture, artistic intervention, and social practices. The often provocative essays, on topics ranging from video porn to Geraldo Rivera to lesbian representation to the politics of video memory, contribute significantly to a much needed reconceptualization of the electronic medium.

The GATT was established in 1947 as a multilateral agreement on international trade. Of the eight rounds of negotiations, the Uruguay Round, covering the period from 1981 to 1994, had the widest participation and involved the most intensive negotiations. It was also the most comprehensive round, encompassing new areas such as trade in services and the protection of intellectual property, as well as longstanding problem areas such as agriculture and textiles. Most significantly, this round resulted in the establishment of a permanent World Trade Organization, which will provide the institutional basis for future international trade and a forum for settlement of disputes.

Using a common framework developed by a collaborative Harvard University and Brandeis University affiliated research team, this volume surveys and analyzes the strategic responses of national unions in Britain, France, Germany, Italy, and Spain to the last two decades of economic change. Also evaluated is the response of Sweden, long seen as the most successful variation of the European model, as well as EU level transnational unionism. The volume concludes with a reflection on new union positions and

their implications, particularly on the question of what will happen to the "European model of society" as a consequence. Annotation copyrighted by Book News, Inc., Portland, OR

In a pioneering work, Jeffrey Fear overturns the dominant understanding of German management as "backward" relative to the U.S. and uncovers an autonomous and sophisticated German managerial tradition. Beginning with founder August Thyssen--the Andrew Carnegie of Germany--Fear traces the evolution of management inside the Thyssen-Konzern and the Vereinigte Stahlwerke (United Steel Works) between 1871 and 1934.

People, problems, and proofs are the lifeblood of theoretical computer science. Behind the computing devices and applications that have transformed our lives are clever algorithms, and for every worthwhile algorithm there is a problem that it solves and a proof that it works. Before this proof there was an open problem: can one create an efficient algorithm to solve the computational problem? And, finally, behind these questions are the people who are excited about these fundamental issues in our computational world. In this book the authors draw on their outstanding research and teaching experience to showcase some key people and ideas in the domain of theoretical computer science, particularly in computational complexity and algorithms, and related mathematical topics. They show evidence of the considerable scholarship that supports this young field, and they balance an impressive breadth of topics with the depth necessary to reveal the power and the relevance of the work described. Beyond this, the authors discuss the sustained effort of their community, revealing much about the culture of their field. A career in theoretical computer science at the top level is a vocation: the work is hard, and in addition to the obvious requirements such as intellect and training, the vignettes in this book demonstrate the importance of human factors such as personality, instinct, creativity, ambition, tenacity, and luck. The authors' style is characterize d by personal observations, enthusiasm, and humor, and this book will be a source of inspiration and guidance for graduate students and researchers engaged with or planning careers in theoretical computer science.

"This is the management book of the year. Clear, powerful and urgent, it's a must read for anyone who cares about where they work and how they work." —Seth Godin, author of This is Marketing "This book is a breath of fresh air. Read it now, and make sure your boss does too." —Adam Grant, New York Times bestselling author of Give and Take, Originals, and Option B with Sheryl Sandberg When fast-scaling startups and global organizations get stuck, they call Aaron Dignan. In this book, he reveals his

proven approach for eliminating red tape, dissolving bureaucracy, and doing the best work of your life. He's found that nearly everyone, from Wall Street to Silicon Valley, points to the same frustrations: lack of trust, bottlenecks in decision making, siloed functions and teams, meeting and email overload, tiresome budgeting, short-term thinking, and more. Is there any hope for a solution? Haven't countless business gurus promised the answer, yet changed almost nothing about the way we work? That's because we fail to recognize that organizations aren't machines to be predicted and controlled. They're complex human systems full of potential waiting to be released. Dignan says you can't fix a team, department, or organization by tinkering around the edges. Over the years, he has helped his clients completely reinvent their operating systems—the fundamental principles and practices that shape their culture—with extraordinary success. Imagine a bank that abandoned traditional budgeting, only to outperform its competition for decades. An appliance manufacturer that divided itself into 2,000 autonomous teams, resulting not in chaos but rapid growth. A healthcare provider with an HQ of just 50 people supporting over 14,000 people in the field—that is named the "best place to work" year after year. And even a team that saved $3 million per year by cancelling one monthly meeting. Their stories may sound improbable, but in Brave New Work you'll learn exactly how they and other organizations are inventing a smarter, healthier, and more effective way to work. Not through top down mandates, but through a groundswell of autonomy, trust, and transparency. Whether you lead a team of ten or ten thousand, improving your operating system is the single most powerful thing you can do. The only question is, are you ready?

Poverty Reduction Strategies (PRSs) are the new buzzwords in development aid. Some 70 countries have already elaborated them in response to World Bank and bilateral aid agency requirements. This book presents detailed, field-level research on the application of PRSs in three countries: Tanzania, Vietnam and Honduras It describes the changing relations between the governments of these countries, donor agencies, and civic organizations that have taken part in formulating the new generation of PRSs. Poverty Reduction Strategies run up against a central paradox: in giving decisive policymaking powers to external agencies, the very process of drawing up development strategies to prioritise reducing poverty can gravely undermine the consolidation of democratic forces, structures and ideas in developing countries.

This book presents the outcomes of the 3rd IEEE/ACIS International Conference on Big Data, Cloud Computing, Data Science & Engineering (BCD 2018), which was held on July 10–12, 2018 in Kanazawa. The aim of the conference was to bring together researchers and scientists, businesspeople and entrepreneurs, teachers, engineers, computer users, and students to discuss the various fields of computer science, to share their experiences, and to exchange new ideas and information in a meaningful way. All aspects (theory, applications and tools) of computer and information science, the practical challenges encountered along the way, and the solutions adopted to solve them are all explored here. The conference organizers selected the best papers from among those accepted for presentation. The papers were chosen on the basis of review scores submitted by members of the program committee and subsequently underwent further rigorous review. Following this second round of review, 13 of the conference's most promising papers were selected for this Springer (SCI) book. We eagerly await the important contributions that we know these authors will make to the field of computer and information science.

Largely set in a futuristic World State, whose citizens are environmentally engineered into an intelligence-based social hierarchy, the novel anticipates huge scientific advancements in reproductive technology, sleep-learning, psychological manipulation and classical conditioning that are combined to make a dystopian society which is challenged by only a single individual: the story's protagonist. Huxley followed this book with a reassessment in essay form, Brave New World Revisited (1958), and with his final novel, Island (1962), the utopian counterpart. The novel is often compared to George Orwell's Nineteen Eighty-Four (published 1949). In 1999, the Modern Library ranked Brave New World at number 5 on its list of the 100 best English-language novels of the 20th century. In 2003, Robert McCrum, writing for The Observer, included Brave New World chronologically at number 53 in "the top 100 greatest novels of all

time", and the novel was listed at number 87 on The Big Read survey by the BBC. This edition pairs Brave New World with Brave New World Revisited, Huxley's book about the original novel.

Any book on planning has to be easy to read and full of examples on how to do it with forms and illustrations. That is exactly what this book is and why it is called a "guidebook". The fact that most people do not plan well is well documented by the demographics of the population and the economic situation that a growing senior population is faced with now due to poor planning or no planning earlier in their lives. Since company's are run by people they exhibit the idiosyncrasies of the people who run them. Many company's do not have strategic plans or operating plans. Some firms do not even have a budget and operate on a day-by-day basis. The obvious result of this is crisis management, cash flow problems and the constant risk of going out of business. Many company's both large and small have disappeared due to the lack of a plan and this has been well documented in the business press. Managers do not have a plan for their business because they do not have a plan for themselves. Planning is not something that we are born with a natural ability to do well, or in many cases - at all. Planning is a learned skill and their is a need for simple step-by-step guides which is what this book is about. It has been written as a result of years of experience that the author has had working with hundreds of company's. The foundation for the book is a process that the author calls the "Plan-for-Planning" - a five step exercise that he has used to help managers build business plans for their company's. It is a proven formula that has resulted in increased profitability, operational efficiencies and the optimization of the overall allocation of resources for the author's clients. It also has been the basis for the development of executive level seminars by the author that have been promoted and implemented by BUSINESS WEEK and Inc. Magazine domestically, and Frost & Sullivan internationally. The initial publication of this book was by Inc. as a result of the success of the seminar series for their audience - growing firms. Articles have been written about the Plan-for-Planning process and it has been instrumental in the development of business plans that have resulted in company's being sold for a premium to the shareholders as a result of the quality of the business planning process. The book has been used by many managers and in some cases continues to be a reference guide for the new businesses that they have become involved with. It is really an easy to use guide for developing a business/strategic plan for any business.

As one of the first books to distill the economics of information and networks into practical business strategies, this is a guide to the winning moves that can help business leaders--from writers, lawyers and finance professional to executives in the entertainment, publishing and hardware and software industries-- navigate successfully through the information economy.
