Evaluates five manual post drivers suited for driving metal T-posts that are 8 to 10 feet long. Standard drivers can't be used for such long posts unless the operator stands on a ladder or in the back of a truck, practices that aren't practical in remote areas and aren't safe on steep terrain. Drivers for longer posts have long handles that allow the driver to be used by an operator standing on the ground. The drivers tested included the Standard-Signs Models NO4 and NO8, the Post Mate, and two drivers developed by the Missoula Technology and Development Center, the PD-1 and PD-2. The tech tip includes information on commercially available models and on two models designed by the Missoula center.

This is the shocking true story of how a young girl from Rochdale came to be Girl A – the key witness in the trial of Britain's most notorious child sex ring. Movie audiences seem drawn, almost compelled, toward tales of the horrific and the repulsive. Partly because horror continues to evolve radically—every time the genre is deemed dead, it seems to come up with another twist—it has been one of the most often-dissected genres. Here, author Kendall Phillips selects ten of the most popular and influential horror films—including Dracula, Night of the Living Dead, Halloween, The Silence of the Lambs, and Scream, each of which has become a film landmark and spawned countless imitators, and all having implications that transcend their cinematic influence and achievement. By tracing the production history, contemporary audience response, and lasting cultural influence of each picture, Phillips offers a unique new approach to thinking about the popular attraction to horror films, and the ways in which they reflect both cultural and individual fears. Though stylistically and thematically very different, all of these movies have scared millions of eager moviegoers. This book tries to figure out why. Here is a unique book. It describes the theories and processes of repairing and adjusting the modern watch in precise and meticulous detail: a thing which has never been done so completely before in the many books on the same subject. As a text book it is a revelation. Taking nothing for granted, except the ability to read and comprehend a simple description of mechanical processes, de Carle takes his reader through every stage and every operation of watch repairing ...and to deal with them thoroughly is quite a programme - it takes 300 pages containing 24 chapters, two appendices and 553 illustrations. The fine draughtsmanship and accurate technical detail of the illustrations set a new standard. Practical Watch Repairing can justifiably claim to be the best illustrated book on practical horology yet issued, and one of the best of its kind on any subject. The publication of the book marks the beginning of a new epoch in the study of the mechanics of horology.
