Japanese literature and film have frequently been approached using lenses such as language, genre and

ideology. Yet, despite a succession of major social traumas that have marked, and in many ways shaped and defined much of modern Japan, Japanese fiction and cinema have not often been examined psychoanalytically. In this book, David Stahl conducts in-depth readings and interpretations of a set of Japanese novels and film. By introducing the methodology of trauma/PTSD studies, Stahl seeks to provide a better understanding of the insights of Japanese writers and directors into their societies, cultures and histories. In particular, by building on the work of practitioner-theoreticians, such as Pierre Janet and Judith Herman, Stahl analyses a number of key texts, including Kawabata Yasunari's *Sleeping Beauties* (1961), Enchi Fumiko's *Female Masks* (1958) and Imamura Sho- hei's *Vengeance is Mine* (1979). Consequently, through using concepts of social trauma, dissociation, failed mourning, revenge and narrative memory, this book sheds new light on the psychological aftereffects and transgenerational legacies of trauma depicted in Japanese works. *Trauma, Dissociation and Re-enactment in Japanese Literature and Film* will be of interest to students and scholars of Japanese Literature and Cinema, as well as those interested in Japanese History and Trauma Studies.

These central themes were born out of extensive market research and feedback from statistics instructors across the country. The authors paid close attention to how material is presented to students, ensuring that the content in the text is very clear, concise, and digestible. High quality exercises, examples and integration of technology are important aspects of an Introductory Statistics text. The authors have provided robust exercise sets that range in difficulty. They have also focused keen attention to ensure that examples provide clear instruction to students. Technology is integrated throughout the text, providing students examples of how to use the TI-83 Plus and TI-84 Plus Graphing Calculators, Microsoft Excel and Minitab. The accuracy of Elementary Statistics was a foundational principle always on the minds of the authors. While this certainly pertains to all aspects of the text, the authors also exhausted energy in ensuring the supplements have been developed to fit cohesively with the text.

Introductory Statistics is designed for the one-semester, introduction to statistics course and is geared toward students majoring in fields other than math or engineering. This text assumes students have been exposed to intermediate algebra, and it focuses on the applications of statistical knowledge rather than the theory behind it. The foundation of this textbook is Collaborative Statistics, by Barbara Illowsky and Susan Dean. Additional topics, examples, and ample opportunities for practice have been added to each chapter. The development choices for this textbook were made with the guidance of many faculty members who are deeply involved in teaching this course. These choices led to innovations in art, terminology, and practical applications, all with a goal of increasing relevance and accessibility for students. We strove to make the discipline meaningful, so that students can draw from it a working knowledge that will enrich their future studies and help them make sense of the world around them. Angelides explores the evolution of sexuology, revisiting modern epistemological categories of sexuality in psychoanalysis, gay liberation, social constructionism, queer theory, biology, and human genetics. He argues that bisexuality has functioned historically as the structural other to sexual identity itself, undermining assumptions about heterosexuality and homosexuality. Watch a video introduction [here](#). Statistics Through Applications (STA) is the only text written specifically for high school statistics course. Designed to be read, the book takes a data analysis approach that emphasizes conceptual understanding over computation, while recognizing that some computation is necessary. The focus is on the statistical thinking behind data gathering and interpretation. The high school statistics course is often the first applied math course students take. STA engages students in learning how statisticians contribute to our understanding of the world and helps students to become more discerning consumers of the statistics they encounter in ads, economic reports, political campaigns, and elsewhere. New and improved! STA 2e features expanded coverage of probability, a reorganized presentation of data analysis, a new color design and much more.
