Consumer behaviour has an increasing impact on business decisions through various individual and environmental factors. This phenomenon can be observed through the different buying patterns of generations and cultures when acquiring products and services. The study of consumer behaviour provides insight into consumer information processing, decision making and consumption patterns and is, therefore, critical to marketing planning and strategies, public policy and ethics. This fascinating subject also helps us understand our own consumer patterns: when, why and where we buy certain items, why we use them in certain ways, and how we dispose of them.

Consumer behaviour is an essential component of both marketing and industrial psychology courses.

of real problem scenarios. It is intended to appeal to a wide audience, including mathematics and statistics majors, prospective engineers and scientists, and those business and social science majors interested in the quantitative aspects of their disciplines. The textbook contains enough material for a year-long course, though many instructors will use it for a single term (one semester or one quarter). As such, three course syllabi with expanded course outlines are now available for download on the book's page on the Springer website. A one-term course would cover material in the core chapters (1-4), supplemented by selections from one or more of the remaining chapters on statistical inference (Ch. 5), Markov chains (Ch. 6), stochastic processes (Ch. 7), and signal processing (Ch. 8—available exclusively online and specifically designed for electrical and computer engineers, making the book suitable for a one-term class on random signals and noise). For a year-long course, core chapters (1-4) are accessible to those who have taken a year of univariate differential and integral calculus; matrix algebra, multivariate calculus, and engineering mathematics are needed for the latter, more advanced chapters. At the heart of the textbook's pedagogy are 1,100 applied exercises, ranging from straightforward to reasonably challenging, roughly 700 exercises in the first four "core" chapters alone—a self-contained textbook of problems introducing basic theoretical knowledge necessary for solving problems and illustrating how to solve the problems at hand – in R and MATLAB, including code so that students can create simulations. New to this edition • Updated and re-worked Recommended Coverage for instructors, detailing which courses should use the textbook and how to utilize different sections for various objectives and time constraints • Extended and revised instructions and solutions to problem sets • Overhaul of Section 7.7 on continuous-time Markov chains • Supplementary materials include three

Organized topically rather than historically, this book provides an excellent introduction to the subject of African Philosophy. Samuel Oluoch Imbo

synthesizes the ideas of key African philosophers into an accessible narrative. The author focuses on five central questions: What are the definitions of African philosophy? Is ethno-philosophy really philosophy? What are the dangers of an African philosophy that claims to be 'unique'? Can African philosophy be done in foreign languages such as English and French? Are there useful ways to make connections between African philosophy, African American philosophy, and women's studies? By making cross-disciplinary and transnational connections, Imbo stakes out an important place for African philosophy. Imbo's book is an invaluable introduction to this dynamic and growing area of study.
