Gaining a better sense of how pupils conceive school geography is crucial if we are to understand the ways in which their ideas and values mediate learning processes.

Geography in Secondary Schools explores how pupils experience geography lessons, what they think geography as a school subject is about, and what it means to them. School geography aims to help young people think about the world and their place in it in a distinctive - geographical - way. However very little is known about the kinds of thinking and values they associate with the subject. Researchers are increasingly taking young people's ideas seriously as important and worthy of investigation in their own right. In this book, Nick Hopwood takes such an approach to explore the relationships between pupils and geography as a school subject. He follows six pupils through their geography lessons for a period of three months, discussing their learning experiences in depth with them. Their participation in class, written work, and comments made in interviews form the basis for a detailed investigation of their ideas.

Visualizing Physical Geography employs uniquely designed visual pedagogy to help students acquire the skills they need to become better learners. The 2nd edition has refined and expanded the visuals using insights from research on student outcomes. The Visualizing approach uses a variety of research-based visuals to engage students so they become active participants in the learning process. *Visualizing Physical Geography* immerses students in course material through visuals (both in print and rich multimedia resources) while organizing complex processes and related course information into easily digestible segments. *Visualizing Physical Geography* is a comprehensive, modern book for today's physical geography course. With current examples, thorough coverage of geographers tools and technology, and a visual design that is accessible without sacrificing content, it is a title that will appeal to a broad range of instructors. The narrative and concepts are tightly linked to visual elements, including practical examples that highlight the relevance of the concepts. Maps are integrated throughout to help reveal patterns or trends. Divergent views and critical thinking are emphasized. Photographs and other visuals are also included to reinforce the concepts.

First published in 1970 this re-issues the revised edition of 1979. This book examines the part played both by tradition and by the Cultural Revolution in the educational system of twentieth century China and explores the apparent reversal of policy which took place since the death of Mao. The book discusses the writings of Mao on the nature of man, society and knowledge and his ideas on education. These are then seen in the context of history, philosophy and religion. Educational aims and policies are discussed, showing how factors such as language, geography, economics and the social structure created obstacles to reform.

More than any other text for the course, Pulsipher's World Regional Geography (WRG) shows students how individuals are affected by, and respond to, economic, social, and political forces at all levels of scale: global, regional, subregional, local. It offers a vivid and inclusive picture of people in a globalizing world--men, women, children, both mainstream and marginalized citizens--not as seen from a Western perspective, but as they see themselves.
