This publication contains 189 individual country profiles, each comprising 30 indicators mostly related to the four main dimensions of commodity dependence, namely: merchandise and commodity export dependence - Commodity import dependence - key socioeconomic indicators - other structural indicators. As commodity dependence tends to negatively affect poverty alleviation and food security, a set of indicators is included to help monitor trends in these areas. For each individual country, 1995 is used as the historical reference year. This study examines the landscape in which Malawi's two agricultural commodity exchanges (Comex) and warehouse receipts systems (WRS) operate and makes recommendations on how to improve their performance and benefits to key stakeholders. A mixed methods approach was adopted, involving semi-structured interviews with key market participants, compilation and analysis of secondary data from Malawi and other African Comex, and a review of existing literature. A review of international experience indicates that historically Comex often develop hand-in-hand with warehouse receipt systems (WRS), which help stimulate demand from off takers for standardized contracts while providing financing that increased volumes traded. In

recent years, electronic trading platforms have given an impetus to the consolidation of existing Comex, and the development of regional networks of exchanges and warehousing arrangements. Nonetheless, a common reason why Comex fail is that they do not attract sufficient trading volumes to pay for their operating costs. This is often associated with default on contracts and fears of the market for commodities being cornered by a few larger traders. Of the 23 Comex in Africa, over half are still in their planning or inception stages and, with the notable exception of the agricultural futures and options traded on the Johannesburg Stock Exchange, most of the remaining Comex are thinly traded and receive financial support from government and/or donors.

Agricultural, energy or mineral commodities are traded internationally in two market categories: physical markets and financial markets. More specifically, on the financial markets, contracts are negotiated, the price of which depends on the price of a commodity. These contracts are called derivatives (futures, options contracts, swaps). This book presents, on the one hand, the characteristics of these derivatives and the markets on which they are traded and, on the other hand, those transactions that typically combine an action on the physical market and a transaction on the corresponding financial market. The understanding of commodity financial markets mainly relies on the resources of economic analysis, especially the financial economy, because the use of this discipline is essential to understanding the major operations that are conducted daily by the operators of these markets: traders, producers, processors, financiers.

Are you interested in learning more about the complex area of structured trade finance? Structured Trade Finance (STF) is a highly specialised area of trade finance that has evolved directly from practice. As it grows and becomes more complex in an increasingly risk-based regulatory environment, there is a need for more detailed guidance on the subject. Foundations of Structured Trade Finance will provide you with exactly this. Written by Dr Oramah — President of Afreximbank and a professional who played an important role in the evolution of STF — this report will:

- Address the philosophical foundations and risks associated with structured trade finance
- Provide step-by-step guidance on how deals can be structured
- Outline the scope of coverage outside the confines of commodities
- Examine real life case studies and draw out lessons that can be learned from these

STF has proven itself as an effective instrument for attracting trade finance to those regions that receive limited trade finance and which lag behind in trade and economic performance. Ensure you're aware of the risks associated with it.

Moscow and Russian oil will be sold in Zurich. To make this trade possible, new financing techniques like structured commodity trade financing are needed. Behind these transactions, reliable tools are inevitable. It is an understatement to say that doing business with someone in another country is more complicated than just finding ways to transport goods over long distances. One of the most obvious differences from doing business domestically is the fact that companies face new risks such as country risks, industry risks and especially credit risks. To make it easier for western creditors to conduct a profitable business in Russia and hedge their risks, lenders need to be aware of the economic, political and legal situation in the country; particularly, the creditors need to understand the new Russian currency law. The intention of the new federal law is to 'create a single government currency policy and to increase the stability of the Russian Federation and its internal currency market'. The purpose of this master thesis is to describe the pros and cons of this law, the risks that western creditors face when they engage in financing export transactions and the ways to prevent these risks. The influence of the federal law "on currency regulation and currency control" on western creditors is a very genuine topic for this master thesis, because this work shall increase the understanding of international finance as well as the interest for its practice in Russia. The absence of a deep research and the freshness of the topic make it especially interesting for investors. Is the recent situation in Russia friendly to western creditors? What aspects of the FZNo173 are necessary to know

when financing Russian exports? What impact will this law have on western creditors? What are the ways to hedge risks associated with the FZNo173? These questions will be discussed in this paper.

the author's personal experience gained through more than 40 years in the field of trade finance. This Companion applies the techniques described in his first volume, Trade and Receivables Finance: A Practical Guide to Risk Evaluation and Structuring to an extensive range of international trade scenarios. Practical solutions are discussed and presented through a specially selected collection of more than 20 case studies. These books provide an unrivalled and highly practical set of manuals for the trade and receivables financier. The reader is taken on a journey from the structuring of trade products including collections, import and export letters of credit, back to back credits, guarantees and standby credits to fully and partially structured financing solutions for the importer, manufacturer, distributor, middle-party and exporter. Each funding technique provides a compelling alternative to an overdraft. The case studies include the risk assessment and financing of open account payables, stock and receivables transactions and the evaluation and use of credit insurance as a supporting tool. The structuring of commodity finance across the trade cycle, to include warehousing, and call-off is also described. Many of the chapters contain a summary 'keynote' overview and comprehensive 'deal sheet' extracts of the chosen solution detailing facility and operational requirements.

They match supply and demand by purchasing and selling commodities. This book provides an accessible and comprehensive introduction to the fascinating topic of Trade & Commodity Finance. This book will be of interest both to people with a general interest in the field and to trade and finance professionals. The book contains five sections: commodities and trade; traders; industry specifics; banks; and financial analysis. Examples and illustrations from the metals industry clarify the arguments made in the text. This makes it a recommended read for every person who would like to learn more about Trade & Commodity Finance.

This book argues that the viability of many observed market and non-market interventions in agricultural products worldwide depends considerably on the underlying behaviour of the relevant commodity markets. Many of these policies have had distortive impacts, resulting in much discussion and controversy in the context of the World Trade Organization (WTO) Doha Round of trade

The second edition of the best-selling *International Trade Finance A Practitioners Guide* is structured as a detailed and practical guide to established and emerging techniques in successful trade finance. Across 9 chapters it explains the practical issues involved in the successful application of modern trade finance practices. Interest areas trade finance, commodity finance, pre-export finance, emerging markets, structured finance. In today's competitive banking industry, institutional banking is attracting greater interest. Under the globalization umbrella, inter-bank business is undergoing dynamic change and is transcending the boundaries of traditional correspondent banking. In today's climate, no bank, regardless of size, can grow without the cooperation of other banks and no bank can hope to survive and prosper without utilizing emerging markets. Institutional banking in emerging countries has some unique functions: for example, problem solving is heavier and more crucial in emerging markets than in developed countries, given the irregularity of the market and non-transparency of the financial/legal systems. Moreover, it is particularly necessary to forge good relationships, day-to-day contact and personal communication, to provide better chances for product marketing and risk management. Products are therefore tailor-made and adapted as the situation dictates, a successful lesson for one case in one country cannot necessarily be repeated in another. the subject combining both principles and practice. The direct experience of the author, allows him to write authoritatively about the subject with academic vigour as well as a large amount of practical knowledge which only a practitioner can provide. The book also contains a supplementary CD which includes chapter summary's and further information. Note: CD-ROM/DVD and other supplementary materials are not included as part of eBook file.

In the universally acclaimed and award-winning *The Bottom Billion*, Paul Collier reveals that fifty failed states--home to the poorest one billion people on Earth--pose the central challenge of the developing world in the twenty-first century. The book shines much-needed light on this group of small nations, largely unnoticed by the industrialized West, that are dropping further and further behind the majority of the world's people, often falling into an absolute decline in living standards. A struggle rages within each of these nations between reformers and corrupt leaders--and the corrupt are winning. Collier analyzes the causes of failure, pointing to a set of traps that ensnare these countries, including civil war, a dependence on the extraction and export of natural resources, and bad governance. Standard solutions do not work, he writes; aid is often ineffective, and globalization can actually make matters worse, driving development to more stable nations. What the bottom billion need, Collier argues, is a bold new

plan supported by the Group of Eight industrialized nations. If failed states are ever to be helped, the G8 will have to adopt preferential trade policies, new laws against corruption, new international charters, and even conduct carefully calibrated military interventions. Collier has spent a lifetime working to end global poverty. In *The Bottom Billion*, he offers real hope for solving one of the great humanitarian crises facing the world today. "Set to become a classic. Crammed with statistical nuggets and common sense, his book should be compulsory reading." --*The Economist* "If Sachs seems too saintly and Easterly too cynical, then Collier is the authentic old Africa hand: he knows the terrain and has a keen ear.... If you've ever found yourself on one side or the other of those arguments--and who hasn't?--then you simply must read this book." --Niall Ferguson, *The New York Times Book Review* "Rich in both analysis and recommendations.... Read this book. You will learn much you do not know. It will also change the way you look at the tragedy of persistent poverty in a world of plenty." --*Financial Times*

This title guides the reader through all the steps involved in commodity financing operations, from pre-export financing to enforcement of security and insolvency issues. product characteristics, supply chains, pricing, liquidity, financial intermediation, industry players and the interplay between derivatives markets and the underlying physical goods. While describing the endogenous factors, it also examines the increasing role of exogenous factors now impacting commodities. Finally, it assesses the drivers of the growth of derivatives markets and their impact on price formation.

This issue discusses a number of factors affecting global growth, as well as growth prospects across the world's main countries and regions. It assesses the ongoing recovery from the global financial crisis in advanced and emerging market economies and evaluates risks, both upside and downside, including those associated with commodity prices, currency fluctuations, and financial market volatility. A special feature examines in detail causes and implications of the recent commodity price downturn; analytical chapters look at the effects of commodity windfalls on potential output and of exchange rate movements on trade.
