The most comprehensive manual of the practice of insight meditation (vipassana), written by one of its foremost 20th century proponents, is translated into English for the first time. Manual of Insight is the magnum opus of Mahasi Sayadaw, one of the originators of the "vipassana movement" that has swept through the Buddhist world over the last hundred years. The manual presents a comprehensive overview of the practice of insight meditation, including the foundational aspects of ethical self-discipline, understanding the philosophical framework for the practice, and developing basic concentration and mindfulness. It culminates with an in-depth exploration of the various types of insight and spiritual fruits that the practice yields. Authored by the master who brought insight meditation to the West and whose students include Joseph Goldstein, Jack Kornfield, and Sharon Salzberg, Manual of Insight is a veritable Bible for any practitioner of vipassana.

This collection brings together some of the most influential sociologists of law to confront the challenges of current transnational constitutionalism. It shows the constitution appearing in a new light: no longer as an essential factor of unity and stabilisation but as a potential defence of pluralism and innovation. The first part of the book is devoted to the analysis of the concept of constitution, highlighting the elements that can contribute from a socio-legal perspective, to clarifying the principle meanings attributed to the constitution. The study goes on to analyse some concrete aspects of the functioning of constitutions in contemporary society. In applying Luhmann's General Systems Theory to a comparative analysis of the concept of constitution, the work contributes to a better understanding of this traditional concept in both its institutionalised and functional aspects. Defining the constitution's contents and functions both at the conceptual level and by taking empirical issues of particular comparative interest into account, this study will be of importance to scholars and students of sociology of law, sociology of politics and comparative public law.

"Kitty Burns Florey seems to write from a great wellspring of inner calm that derives from a gleeful appreciation of life's smallest details." —Richard Russo, Pulitzer Prize-winning author of Empire Falls  
Once wildly popular in grammar schools across the country, sentence diagramming has fallen out of fashion. But are we that much worse for not knowing the word-mapping method? Now, in this illustrated personal history that any language lover will adore, Kitty Burns Florey explores the rise and fall of sentence diagramming, including its invention by a mustachioed man named Brainerd "Brainy" Kellogg and his wealthy accomplice Alonzo Reed ... the inferior "balloon diagram" predecessor ... and what diagrams of sentences by Hemingway, Welty, Proust, Kerouac and other famous writers reveal about them. Florey also offers up her own common-sense approach to learning and using good grammar. And she answers some of literature's most pressing questions: Was Mark Twain or James Fenimore Cooper a better grammarian? What are the silliest grammar rules? And what's Gertude Stein got to do with any of it?

This text/atlas is a unique source of practical information for clinicians who must interpret polysomnography tracings of the neonate, infant, child, and adult. Most atlases show only the images of the various findings; this atlas emphasizes how to actually interpret and report on the polysomnography findings. In the Second Edition, the authors have expanded the captions to include both explanations and helpful hints as well as formal interpretation. The book is organized into sections that allow it to be both comprehensive and practical. This edition has been expanded to cover the breadth and depth of neonatal and pediatric sleep.

The prophet Muhammad and the early Islamic community radically redefined the concept of time that they had inherited from earlier religions' beliefs and practices. This new temporal system, based on a lunar calendar and era, was complex and required sophistication and accuracy. From the ninth to the sixteenth centuries, it was the Muslim astronomers of the Ottoman, Safavid and Mughal empires who were responsible for the major advances in mathematics, astronomy and astrology. This fascinating study compares the Islamic concept of time, and its historical and cultural significance, across these three great empires. Each empire, while mindful of earlier models, created a new temporal system, fashioning a new solar calendar and era and a new round of rituals and ceremonies from the cultural resources at hand. This book contributes to our understanding of the Muslim temporal system and our appreciation of the influence of Islamic science
