Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve

outcomes for children.

Adolescence is a time when youth make decisions, both good and bad, that have consequences for the rest of their lives. Some of these decisions put them at risk of lifelong health problems, injury, or death. The Institute of Medicine held three public workshops between 2008 and 2009 to provide a venue for researchers, health care providers, and community leaders to discuss strategies to improve adolescent health.

Connecting Research & Results As a master teacher, Santrock connects students to current research and real world application. His integrated, personalized learning program gives students the insight they need to study smarter and improve performance. Connect with Life-Span Development and connect with success! Informed and driven by research. This is the only text to examine the experience of disability in relation to theories of human growth and development. It provides a foundational and comprehensive examination of disability that encompasses the intellectual, psychiatric, physical, and social arenas. The second edition is updated to underscore its versatility as an introductory text about the developmental tasks of people with disabilities for all the helping professions. Reorganized to illuminate the book's interdisciplinary focus, it includes new demographics, new case studies and first-person accounts, discussions on cultural aspects of disabilities, family concerns, and more. The text delivers practice guidelines for each of the conventional life stages and describes the developmental tasks of individuals with disabilities (IWDs). It emphasizes the positive trend in the perception of IWDs as normal and underscores the fact that IWDs have the same motivations, emotions, and goals as those without disabilities. Learning activities, suggestions for writing exercises, and websites for further study reinforce learning, as do graphs and charts illustrating trends and demographics. **NEW TO THE SECOND EDITION:** Introductory chapter on understanding disability Demographic updates throughout New case studies and first-person accounts Expanded discussions about cultural considerations, intersectionality, and family considerations Updated Instructor's Manual and an Instructor's Test Bank **KEY FEATURES:** Examines the conventional stages of human growth and development from the perspective of individuals with disabilities Integrates disability concepts with developmental theories and stages of the lifespan Addresses common ethical issues to illuminate the real-world implications faced by individuals with disabilities and their families Includes learning activities, suggestions for writing exercises, and websites for further study Purchase includes digital access for use on most mobile devices or computers.

In this introductory text on thanatology, Alan Kemp continues to take on the central question of mortality: the centrality of death coupled with the denial of death in the human experience. Drawing from the work of Ernest Becker, *Death, Dying, and Bereavement in a Changing World* provides a multidisciplinary and multidimensional approach to the study of death, putting extra emphasis on the how death takes place in a rapidly changing world. This new, second edition includes the most up-to-date research, data, and figures related to death and dying. New research on the alternative death movement, natural disaster-related deaths, and cannabis as a form of treatment for life-threatening illnesses, and updated research on physician-assisted suicide, as well as on grief as it relates to the DSM-5 have been added.

Understanding the Life Course provides a uniquely comprehensive guide to the entire life course from an interdisciplinary perspective. Combining important insights from sociology and psychology, the book presents the concept's theoretical underpinnings in an accessible style, supported by real-life examples. From birth and becoming a parent, to death and grieving for the loss of others, Lorraine Green explores all stages of the life course through key research studies and theories, in conjunction with issues of social inequality and critical examination of lay viewpoints. She highlights the many ways the life course can be interpreted, including themes of linearity and multidirectionality, continuity and discontinuity, and the interplay between nature and nurture. The second edition updates key data and includes additional material on topics such as new technologies, changing markers of transitions to adulthood, active ageing, resilience and neuropsychology. This comprehensive approach will continue to be essential reading for students on vocational programmes such as social work and nursing, and will provide thought-provoking insight into the wider contexts of the life course for students of psychology and sociology.
