It is possible to be 'irrational' without being 'uneconomic'? What is the link between 'Value' and 'values'? What do economists do when they 'explain'? We live in times when the economic logic has become unquestionable and all-powerful so that our quotidian economic experiences are defined by their scientific construal. This book is the result of a multifaceted investigation into the nature of knowledge produced by economics, and the construction of the category that is termed 'economic' with its implied exclusions. It is an attempt to think economics Otherwise, that is, a questioning of economics as if difference mattered. Nitasha Kaul re-examines certain understood ways of thinking about economics as a discipline, especially in relation to questions of identity and difference. This book explores the notion that economics is not a timeless, universal, objective science but a changing response to the problems of knowledge and administration. The epistemological inheritance of economics is 'rooted' in the enlightenment, and it also inherits the liberal paradoxes of that age. Kaul argues that the juxtaposition of identity with economic (culture/economy) is essential, and can only be achieved by critiquing establishment economists' discourse on identity, and taking feminist poststructural and postcolonial work seriously. The author challenges the assumption that there is a simple linkage between the category economic, the entity economy and the study of economics. She envisions an economics in the plural: contextual, social, political—econo-mixes. The book brings together some of the most urgent topics of the day—the power of economics as a discipline, the questions of difference and the politics of identity, and feminist perspectives on this. It will be particularly relevant to heterodox economists, feminist theorists, postcolonial studies scholars, social and cultural theorists, philosophers and history of ideas or intellectual history of thought scholars.

The most powerful force in the world economy today is the redefinition of the relationship between state and marketplace - a process that goes by the name of privatization though this term is inadequate to express its far-reaching changes. We are moving from an era in which governments sought to seize and control the 'commanding heights' of the economy to an era in which the idea of free markets is capturing the commanding heights of world economic thinking. Basic views of how society ought to be organized are undergoing rapid change, trillions of dollars are changing hands and so is fundamental political power. Great new wealth is being created - as are huge opportunities and huge risks. Taking a worldwide perspective, including Britain, where the process began with Mrs Thatcher, Europe and the former USSR, China, Latin America and the US, THE COMMANDING HEIGHTS shows how a revolution in ideas is transforming the world economy - why it is happening, how it can go wrong and what it will mean for the global economy going into the twenty-first century.
