Czerski provides the tools to alter the way we see everything around us by linking ordinary objects and occurrences, like popcorn popping, coffee stains, and fridge magnets, to big ideas like climate change, the energy crisis, or innovative medical testing. She provides answers to vexing questions: How do ducks keep their feet warm when walking on ice? Why does it take so long for ketchup to come out of a bottle? Why does milk, when added to tea, look like billowing storm clouds? In an engaging voice at once warm and witty, Czerski shares her stunning breadth of knowledge to lift the veil of familiarity from the ordinary.

PHYSICAL GEOGRAPHY, 9e, International Edition, uses the combined expertise of four respected geographers to show how Earth's physical geography impacts humans, and how humans impact Earth's physical geography. The text emphasizes three essential themes to demonstrate the major roles for the discipline -- Geography as a Physical Science, Geography as the Spatial Science, and Geography as Environmental Science. With a renewed focus on examining relationships and processes among Earth systems, this text will help you understand how the various systems interrelate and how humans are an integral aspect of geography. Historically the first book to take a conservation approach, the authors continue to emphasize the theme of environmental and human impacts.

Incorporating text and art, this essential study tool contains chapter notes, with key terms and page references as well as questions for review.

The relationship between landscape and culture seen through language is an exciting and increasingly explored area. This ground-breaking book contributes to the linguistic examination of both cross-cultural variation and unifying elements in geographical categorization. The study focuses on the contrastive lexical semantics of certain landscape words in a number of languages. The aim is to show how geographical vocabulary sheds light on the culturally and historically shaped ways people see and think about the land around them. Notably, the study presents landscape concepts as anchored in a human-centred perspective, based on our cognition, vision, and experience in places. The Natural Semantic Metalanguage (NSM) approach allows an analysis of meaning which is both fine-grained and transparent. The book is aimed, first of all, at scholars and students of linguistics. Yet it will also be of interest to researchers in geography, environmental studies, anthropology, cultural studies, Australian Studies, and Australian Aboriginal Studies because of the book's cultural take.

Focuses on how the normal processes of the Earth concentrate their energies and deal heavy blows to humans and their structures. It is concerned with how the natural world operates and, in so doing, kills and maims humans and destroys their works. Throughout the book, certain themes are maintained: energy sources underlying disasters; plate tectonics and climate change; earth processes operating in rock, water, and atmosphere; significance of geologic time; complexities of multiple variables operating simultaneously; detailed and readable case studies.--From publisher description.

This book provides a scholarly assessment and analysis of the Trump campaign and early presidency. This assessment and analysis is important not only to help provide some coherence to the turbulent and unpredictable character of "Trumpism," but to contribute to establishing a scholarly foundation for future works that will provide assessments of the Trump presidency in its mid and later stages. Given the divisive and destructive capacity of "Trumpism" and its political and social implications both domestically and internationally, understanding the distinctive political phenomenon of "Trumpism" is necessary if resistance to this transformative moment in American political history is to be successful. This book collects a series of short scholarly contributions on various themes related to "Trumpism" by scholars from disciplines in both the Humanities and Social Sciences.

The study of ancient metals in their social and cultural contexts has been a topic of considerable interest in archaeology and ancient history for decades, partly due to the modern dependence on technology and man-made materials. The formal study of Archaeometallurgy began in the 1970s-1980s, and has seen a recent growth in techniques, data, and theoretical movements. This comprehensive sourcebook on Archaeometallurgy provides an overview of earlier research as well as a review of modern techniques, written in an approachable way. Covering an extensive range of archaeological time-periods and regions, this volume will be a valuable resource for those studying archaeology worldwide. It provides a clear, straightforward look at the available methodologies, including: • Smelting processes • Slag analysis • Technical Ceramics • Archaeology of Mining and Field Survey • Ethnoarchaeology • Chemical Analysis and Provenance

Studies • Conservation Studies With chapters focused on most geographic regions of Archaeometallurgical inquiry, researchers will find practical applications for metallurgical techniques in any area of their study. Ben Roberts is a specialist in the early metallurgy and later prehistoric archaeology of Europe. He was the Curator of the European Copper and Bronze Age collections at the British Museum between 2007 and 2012 and is now a Lecturer in Prehistoric Europe in the Department of Archaeology at the Durham University, UK. Chris Thornton is a specialist in the ancient metallurgy of the Middle East, combining anthropological theory with archaeometrical analysis to understand the development and diffusion of metallurgical technologies throughout Eurasia. He is currently a Consulting Scholar of the University of Pennsylvania Museum, where he received his PhD in 2009, and the Lead Program Officer of research grants at the National Geographic Society.

Domestications traces a genealogy of American global engagement with the Global South since World War II. Hosam Aboul-Ela reads American writers contrapuntally against intellectuals from the Global South in their common—yet ideologically divergent—concerns with hegemony, world domination, and uneven development. Using Edward Said's Culture and Imperialism as a model, Aboul-Ela explores the nature of U.S. imperialism's relationship to literary culture through an exploration of five key terms from the postcolonial bibliography: novel, idea, perspective, gender, and space. Within this framework the book examines juxtapositions including that of Paul Bowles's Morocco with North African intellectuals' critique of Orientalism, the global treatment of Vietnamese liberation movements with the American narrative of personal trauma in the novels of Tim O'Brien and Hollywood film, and the war on terror's philosophical idealism with Korean and post-Arab nationalist materialist archival fiction. Domestications departs from other recent studies of world literature in its emphases not only on U.S. imperialism but also on intellectuals working in the Global South and writing in languages other than English and French. Although rooted in comparative literature, its readings address issues of key concern to scholars in American studies, postcolonial studies, literary theory, and Middle Eastern studies.

Drawing on several years of research, this set of essays is designed to help graduate students and early career faculty start their careers in geography and related social and environmental sciences. Aspiring Academics stresses the interdependence of teaching, research, and service—and the importance of achieving a healthy balance in professional and personal life—in faculty work, and does not view it as a collection of unrelated tasks. Each chapter provides accessible, forward-looking advice on topics that often cause the most stress in the first years of a college or university appointment. For all readers interested in geography and environmental sciences.

This extensively revised, restructured, and updated edition continues to present an engaging and comprehensive introduction to the subject, exploring the world's landforms from a broad systems perspective. It covers the basics of Earth surface forms and processes, while reflecting on the latest developments in the field. Fundamentals of Geomorphology begins with a consideration of the nature of geomorphology, process and form, history, and geomorphic systems, and moves on to discuss: structure: structural landforms associated with plate tectonics and those associated with volcanoes, impact craters, and folds, faults, and joints process and form: landforms resulting from, or influenced by, the exogenic agencies of weathering, running water, flowing ice and meltwater, ground ice and frost, the wind, and the sea; landforms developed on limestone; and landscape evolution, a discussion of ancient landforms, including palaeosurfaces, stagnant landscape features, and evolutionary aspects of landscape change. This third edition has been fully updated to include a clearer initial explanation of the nature of geomorphology, of land surface process and form, and of land-surface change over different timescales. The text has been restructured to incorporate information on geomorphic materials and processes at more suitable points in the book. Finally, historical geomorphology has been integrated throughout the text to reflect the importance of history in all aspects of geomorphology. Fundamentals of Geomorphology provides a stimulating and innovative perspective on the key topics and debates within the field of geomorphology. Written in an accessible and lively manner, it includes guides to further reading, chapter summaries, and an extensive glossary of key terms. The book is also illustrated throughout with over 200 informative diagrams and attractive photographs, all in colour.

Understanding American Politics provides a unique introduction to the contemporary political landscape of the United States by using as its core organizing feature the idea of "American exceptionalism," a concept that is at least as old as Tocqueville's study of American democracy. The second edition of Understanding American Politics maintains the unique strengths of the first edition while offering improved coverage of political institutions. A single omnibus chapter on institutions has been reorganized and split into three separate chapters on Congress, the presidency, and the courts. A new chapter on public opinion has also been included, and the chapter on religion and politics has been completely rewritten with a deeper appreciation of religion's influential role. The book has been revised throughout, taking into account the dramatic changes that have emerged since the 2010 congressional elections and the 2012 presidential election. The text also pays close attention to what is seen as the irreversible decline in America's global influence. Visit www.utpamericanpolitics.com for additional resources.

Inhaltsangabe:Abstract: Building on approaches that have succeeded in applying semiotic principles and methodology to computer science, such as computer semiotics, computational semiotics, and semiotic interface engineering, this dissertation establishes a systematic account for those researchers who are ready to look at hypertext from a semiotic point of view. Rather than a new hypertext model, this work presents the prolegomena of a theory of hypertext semiotics, interlacing the existing models with the findings of semiotic research, on all levels of the textual, aural, visual, tactile and olfactory channels. A short history of hypertext, from its prehistory to today's state of the art systems and the current developments in the commercialized World Wide Web creates the context for this approach which should be seen as a fortification of the connection between the media semiotic approach and computer semiotics. While computer semioticians claim that the computer is a semiotic machine and Artificial Intelligence scientists underline the importance of semiotics for the construction of the next hypertext generation, this paper makes use of a much broader methodological basis. These findings are placed in the context of the commercialization of the Internet. Besides identifying the main challenges for eCommerce from the viewpoint of hypertext semiotics, the author concentrates on information goods and the current limitations for a new economy, such as restrictive intellectual property and copyright laws. A semiotic analysis of iMarketing techniques and the Toywar complete the dissertation. Zusammenfassung: Diese Dissertation legt einen systematischen Ansatz für all jene Forscher dar, die bereit sind, Hypertext aus einer semiotischen Perspektive zu betrachten. Durch die Verknüpfung existierender Hypertext-Modelle mit den Resultaten aus der Semiotik auf allen Sinnesebenen der textuellen, auditiven, visuellen, taktilen und geruchlichen Wahrnehmung skizziert der Autor Prolegomena einer Hypertext-Semiotik-Theorie, anstatt ein völlig neues Hypertext-Modell zu präsentieren. Eine Einführung in die Geschichte der Hypertexte, von ihrer Vorgeschichte bis zum heutigen Entwicklungsstand und den gegenwärtigen Entwicklungen im kommerzialisierten World Wide Web bilden den Rahmen für diesen Ansatz, welcher als Fundierung des Brückenschlages zwischen Mediensemiotik und Computer-Semiotik angesehen werden darf. Während Computer-Semiotiker wissen, dass der Computer [...]
