MATHEMATICS FOR ELEMENTARY SCHOOL TEACHERS, 6E offers future teachers a comprehensive mathematics course designed to foster concept development through examples, investigations, and explorations. In this text, intended for the one- or two-semester course required of Education majors, Bassarear demonstrates that there are many paths to solving a problem, and sometimes problems have more than one solution. The author presents real-world problems—problems that require active learning in a method similar to how archaeologists explore an archaeological find: they carefully uncover the site, slowly revealing more and more of the structure. Visual icons throughout the main text allow instructors to easily connect content to the hands-on activities in the corresponding Explorations Manual. With this exposure, future teachers will be better able to assess student needs using diverse approaches. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

This book is designed to provide elementary school teachers with information, suggestions, and models for using writing in the social studies, from early primary to middle grades. There are four major chapters to the book. Chapter I is titled "Research on the Teaching of Writing." The articles in this first section move from a survey of research in writing to a survey of classroom practice in the use of writing in elementary school social studies and finally to a specific classroom study that integrates the two areas and presents specific implications for the study and teaching of writing. Chapter II is titled "Developing Readiness in Writing." The first two articles stress two important aspects of a classroom environment that nurtures and supports student writing. The remaining five articles describe techniques such as interviewing, exploring the past, and brainstorming that teachers can use to initiate writing. The title of Chapter III which contains seven articles is "Using Writing to Learn Social Studies Content." The articles describe ways in which writing can be used to help students learn social studies information or develop social studies generalizations. Another describes how writing can be used to conduct simulated field trips in the social studies classroom. The title of Chapter IV is "Combining Writing with Social Studies." Discussed are three essential supports for a successful program: a detailed curriculum guide, inservice teacher training, and cooperative teacher/administrator assessment procedures. The book

also cites related resources in the ERIC system. (Author/RM)

According to Piaget, all higher-order thinking skills have their bases in activities involving concrete manipulation and observation. The third edition of this highly regarded collection of social studies activities continues to be based on the premise that children learn best through experiences and activities—learning by doing. It features new activities for each social studies category (geography, history, anthropology, sociology, economics, political science, and interdisciplinary). Three important new additions to the key elements of the easy-to-follow activity format make it easier for instructors to meet standards-based curriculum requirements: A detailed treatment of National Council of Social Studies standards addressed; specific multiple intelligences addressed (also reinforced by a multiple intelligences section in the back of the book); and useful Web site(s) for group/individual research (URLs for sites that will expand or enrich the learning experience for the activity). By engaging pupils in meaningful, worthwhile social studies activities, instructors can emphasize the processes of learning rather than the products, resulting in a richly rewarding experience for pupils and teacher alike.
