This book is about the tribal people of Southern Africa who have ceased to exist. So much has changed, so much is changing and so much has already been lost. Dr Martin West and Jean Norris have collaborated to create an image in words and pictures of what remains of the traditional African way of life in South Africa. All the major groups are described; their customs, rituals and dress are shown and the meanings discussed. This is a record of a way of life centuries old but now, inexorably, drawing to an end. It may well be that at some point in the future, all that will remain of this proud heritage will be its oblique reflection in the new emerging black society.

The ethical treatment of animals has become an issue of serious moral concern. Many people are challenging long-held assumptions about animals and raising questions about their status and treatment. What is the relationship between humans and animals? Do animals have moral standing? Do we have direct or indirect duties to animals? Does human benefit always outweigh animal suffering? The use of animals for experimentation raises all of these questions in a particularly insistent way. Donna Yarri gives an overview of the current state of the discussion, and presents an argument for significantly restricted animal experimentation. Pointing to the similarities between humans and animals, she argues that the actual differences are differences of degree rather than kind. Animal cognition and animal sentience together are the basis for the claim that experimental animals do have rights. Examining arguments in the disciplines of ethology, philosophy, science, and theology, Yarri makes a case for placing substantial restrictions on animal experimentation. Grounding her examination in Christian theology, she formulates a more humane approach to animal experimentation. She concludes with a concrete burden-benefit analysis that can serve as the foundation for informed decision-making. *The Ethics of Animal Experimentation* serves as both a handbook of animal rights theory and a practical guide to navigating the complexities of animal experimentation. As animal experimentation features in an increasing number of scientific endeavors, it is an ethical issue that requires our immediate attention. Yarri's unique contribution forges a path toward an ethical practice of animal experimentation.

The voices of birds have always been a source of fascination. Nature's Music brings together some of the world's experts on birdsong, to review the advances that have taken place in our understanding of how and why birds sing, what their songs and calls mean, and how they have evolved. All contributors have strived to speak, not only to fellow experts, but also to the general reader. The result is a book of readable science, richly illustrated with recordings and pictures of the sounds of birds. Bird song is much more than just one behaviour of a single, particular group of organisms. It is a model for the study of a wide variety of animal behaviour systems, ecological, evolutionary and neurobiological. Bird song sits at the intersection of breeding, social and cognitive behaviour and ecology. As such interest in this book will extend far beyond the purely ornithological - to behavioural ecologists, psychologists and neurobiologists of all kinds. * The scoop on local dialects in birdsong * How birdsongs are used for fighting and flirting * The writers are all international authorities on their subject
