From the New York Times bestselling author of Dreamland, a searing follow-up that explores the terrifying next stages of the opioid epidemic and the quiet yet ardent stories of community repair. Sam Quinones traveled from Mexico to main streets across the U.S. to create Dreamland, a groundbreaking portrait of the opioid epidemic that awakened the nation. As the nation struggled to put back the pieces, Quinones was among the first to see the dangers that lay ahead: synthetic drugs and a new generation of kingpins whose product could be made in Magic Bullet blenders. In fentanyl, traffickers landed a painkiller a hundred times more powerful than morphine. They laced it into cocaine, meth, and counterfeit pills to cause tens of thousands of deaths-at the same time as Mexican traffickers made methamphetamine cheaper and more potent than ever, creating, Sam argues, swaths of mental illness and a surge in homelessness across the United States. Quinones hit the road to investigate these new threats, discovering how addiction is exacerbated by consumer-product corporations. "In a time when drug traffickers act like corporations and corporations like traffickers," he writes, "our best defense, perhaps our only defense, lies in bolstering community." Amid a landscape of despair, Quinones found hope in those embracing the forgotten and ignored, illuminating the striking truth that we are only as strong as our most vulnerable. Weaving analysis of the drug trade into stories of humble communities, The Least of Us delivers an unexpected and awe-inspiring response to the call that shocked the nation in Sam Quinones's award-winning Dreamland.

The best book ever written in the field of clandestine chemistry has just gotten better in a new 8th edition. I have trained the champions of the field of clandestine chemistry for over 20 years, and this book gives the new techniques required for this constantly evolving field. I have uncovered a very easily done and supplied method for cooking your own ephedrine and pseudoephedrine from health food store and hardware store materials. This completely eliminates the need to show ID and buy adulterated and expensive pills containing these materials. I have also reconfigured older recipes to make use of the weaker or polluted materials now commonly found on hardware store shelves. This 8th edition shows the futility of politically motivated attempts by pandering politicians to regulate the private lives of individuals.

In its steady march across the United States, methamphetamine has become, to quote former Attorney General Alberto Gonzales, "the most dangerous drug in America." As a result, there has been a concerted effort at the local level to root out the methamphetamine problem by identifying the people at its source—those known or suspected to be involved with methamphetamine. Government-sponsored anti-methamphetamine legislation has enhanced these local efforts, formally and informally encouraging rural residents to identify meth offenders in their communities. Policing Methamphetamine shows what happens in everyday life—and to everyday life—when methamphetamine becomes an object of collective concern. Drawing on interviews with users, police officers, judges, and parents and friends of addicts in one West Virginia town, William Garriott finds that this overriding effort to confront the problem changed the character of the community as well as the role of law in creating and maintaining social order. Ultimately, this work addresses the impact of methamphetamine and, more generally, the war on drugs, on everyday life in the United States.

New Zealand's underworld of organised crime and deadly gangs New Zealand is now one of the most lucrative illicit drug markets in the world. Organised crime is about making money. It's a business. But over the past 20 years, the dealers have graduated from motorcycle gangs to Asian crime syndicates and now the most dangerous drug lords in the world - the Mexican cartels. In Gangland, award-winning investigative reporter Jared Savage shines a light into New Zealand's rising underworld of organised crime and violent gangs. The brutal execution of a husband-and-wife; the undercover cop who infiltrated a casino VIP lounge; the midnight fishing trip which led to the country's biggest cocaine bust; the gangster who shot his best friend in a motorcycle shop: these stories go behind the headlines and open the door to an invisible world - a world where millions of dollars are made, life is cheap, and allegiances change like the flick of a switch.

Crystal methamphetamine is reaching epidemic levels among gay men in the US. Tweakers - crystal addicts - get a quick cheap high, an exhilarating loss of inhibition and increased stamina at the price of permanent behaviour changes, brain damage and death. Almost a third of new cases of HIV are caused by the loss of sexual inhibition brought on by loss of mental capacity. Frank Sanello, author the acclaimed Opium Wars, tells the terrifying truth about this deadly drug but also shares invaluable information and resources that offer hope and help to users.

Hells Angels and fallen televangelist Ted Haggard. Cross-country truckers and suburban mothers. Trailer parks, gay sex clubs, college campuses, and military battlefields. In this fascinating book, Frank Owen traces the spread of methamphetamine—meth—from its origins as a cold and asthma remedy to the stimulant wiring every corner of American culture. Meth is the latest "epidemic" to attract the attention of law enforcement and the media, but like cocaine and heroin its roots are medicinal. It was first synthesized in the late nineteenth century and applied in treatment of a wide range of ailments; by the 1940s meth had become a wonder drug, used to treat depression, hyperactivity, obesity, epilepsy, and addictions to other drugs and alcohol. Allied, Nazi, and Japanese soldiers used it throughout World War II, and the returning waves of veterans drove demand for meth into the burgeoning postwar suburbs, where it became the "mother's helper" for a bored and lonely generation. But meth truly exploded in the 1960s and '70s, when biker gang cooks using burners, beakers, and plastic tubes brought their expertise from California to the Ozarks, the Southwest, and other remote rural areas where the drug could be manufactured in kitchen labs. Since then, meth has been the target of billions of dollars in federal, state, and local anti-drug wars. Murders, violent assaults, thefts, fires, premature births, and AIDS—rises in all of these have been blamed on the drug that crosses classes and subcultures like no other. Acclaimed journalist Frank Owen follows the users, cooks, dealers, and law enforcers to uncover a dramatic story being played out in cities, small towns, and farm communities across America. No Speed Limit is a panoramic, high-octane investigation by a journalist who knows firsthand the powerful highs and frightening lows of meth.

The classic thriller about a hostile foreign power infiltrating American politics: "Brilliant . . . wild and exhilarating." —The New Yorker A war hero and the recipient of the Congressional Medal of Honor, Sgt. Raymond Shaw is keeping a deadly secret—even from himself. During his time as a prisoner of war in North Korea, he was brainwashed by his Communist captors and transformed into a deadly weapon—a sleeper assassin, programmed to kill without question or mercy at his captors' signal. Now he's been returned to the United States with a covert mission: to kill a candidate running for US president . . . This "shocking, tense" and sharply satirical novel has become a modern classic, and was the basis for two film adaptations (San Francisco Chronicle). "Crammed with suspense." —Chicago Tribune "Condon is wickedly skillful." —Time

Traces the efforts of a small Iowa community to counter the pervasiveness of crystal methamphetamine, in an account that offers insight into the drug's appeal while chronicling the author's numerous visits with the town's doctor, the local prosecutor and a long-time addict. Reprint. A best-selling book.

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval

and monitoring.

A man is accused of attempted murder of a former crystal meth addict. He claims he shot in self-defense, responding to the extremely aggressive behavior the victim was exhibiting. How will this play out in court? Most likely, the prosecution and the defense will call various expert witnesses - perhaps neurologists, psychologists, pathologists - each with testimonies based on their own theoretical viewpoints, but none with a truly comprehensive knowledge of the background and effects of methamphetamine (MA) use. This will cause confusion, complexity, and their testimonies may not comply with Daubert standards. Written by a multidisciplinary team of experts, *Methamphetamine Use: Clinical and Forensic Aspects* examines MA use and abuse from clinical, forensic, and criminal justice perspectives. It is the first to cover virtually every aspect, reviewing the history, pharmacology, pathology, physiology, treatment, and evidentiary value of MA and its use. It addresses Daubert considerations and victim/witness credibility, competency to confess and to stand trial, criminal responsibility, extreme emotion as mitigation to murder, and dangerousness. It also details statutes and case law to represent perspectives of both the prosecution and the defense. Growing in popularity more than any other illegal drug, methamphetamine has been shown to produce a paranoid psychotic state, which may recur months or years after use. *Methamphetamine Use: Clinical and Forensic Aspects* provides a comprehensive, critical survey of the current knowledge and policies regarding the use and abuse of this dangerous and ubiquitous substance.

New York Times Bestseller "[A] fascinating, engrossing, often dark history of drug use in the Third Reich." — Washington Post The Nazi regime preached an ideology of physical, mental, and moral purity. Yet as Norman Ohler reveals in this gripping new history, the Third Reich was saturated with drugs: cocaine, opiates, and, most of all, methamphetamines, which were consumed by everyone from factory workers to housewives to German soldiers. In fact, troops were encouraged, and in some cases ordered, to take rations of a form of crystal meth—the elevated energy and feelings of invincibility associated with the high even help to account for the breakneck invasion that sealed the fall of France in 1940, as well as other German military victories. Hitler himself became increasingly dependent on injections of a cocktail of drugs—ultimately including Eukodal, a cousin of heroin—administered by his personal doctor. Thoroughly researched and rivetingly readable, *Blitzed* throws light on a history that, until now, has remained in the shadows. "Delightfully nuts." — The New Yorker NORMAN OHLER is an award-winning German novelist, screenwriter, and journalist. He is the author of the novels *Die Quotenmaschine* (the world's first hypertext novel), *Mitte*, and *Stadt des Goldes* (translated into English as *Ponte City*). He was cowriter of the script for Wim Wenders's film *Palermo Shooting*. He lives in Berlin.

This classic now in its third edition covers all the best methods used to make LSD. It also gives detailed information on the chemicals used to make LSD in combination with lysergic acid, and what ordinary uses they have. The book also covers solvent management since extraction of lysergic acid from natural sources entails the use of a considerable amount of solvents. To further entertain the reader, a section is devoted to the production of TMA-2 from calamus oil, and MDMA or MDA from sassafras oil. A still further section is devoted to keeping out of trouble.

This celebration of the Second Amendment makes the point that if one's ammunition is made useless, what one has is then the de facto repeal of the Second Amendment. This repeal would have disastrous consequences, as shown by many historical examples given in the text wherein the disarmament of the civilian population was the prelude to mass homicidal or genocidal slaughters. In the text, I detail which types of ammunition are suitable for use against body armor clad intruders, and then I proceed to give in great detail how to increase their usefulness by coating the projectile with a layer of teflon. Coating details are given for both commercially available ammunition, and for home turned solid steel projectiles.
