A collection of essays that demonstrates that to be effective in the twenty-first century, mission must be prophetic as it encounters other cultures and religious traditions. "When we speak as mission as dialogue, then, we are about as far away from imagining mission as 'conquering the world for Christ' and missionaries as 'marines of the Catholic Church' as we probably can get. There has indeed been a radical shift, both in the world in which the church does mission and within the church's own consciousness of the goodness and even holiness of that world." These words from one of the essays in this superb collection clearly demonstrate the changing of mission today. In this volume, Fathers Bevans and Schroeder address a primary challenge faced by Christians missionaries today: How can they bring the Christian tradition to interact respectfully and effectively with members of other cultures and traditions from around the globe and still be prophetic?

The series Topics in Current Chemistry presents critical reviews of the present and future trends in modern chemical research. The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology, medicine and materials science. The goal of each thematic volume is to give the non-specialist reader, whether in academia or industry, a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience. Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data, but should rather be conceptual, concentrating on the methodological thinking that will allow the non-specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field. Review articles for the individual volumes are invited by the volume editors. Readership: research chemists at universities or in industry, graduate students.

The Closed World offers a radically new alternative to the canonical histories of computers and cognitive science. Arguing that we can make sense of computers as tools only when we simultaneously grasp their roles as metaphors and political icons, Paul Edwards shows how Cold War social and cultural contexts shaped emerging computer technology--and were transformed, in turn, by information machines. The Closed World explores three apparently disparate histories--the history of American global power, the history of computing machines, and the history of subjectivity in science and culture--through the lens of the American political imagination. In the process, it reveals intimate links between the military projects of the Cold War, the evolution of digital computers, and the origins of cybernetics, cognitive psychology, and artificial intelligence. Edwards begins by describing the emergence of a "closed-world discourse" of global surveillance and control through high-technology military power. The Cold War political goal of "containment" led to the SAGE continental air defense system, Rand Corporation studies of nuclear strategy, and the advanced technologies of the Vietnam War. These and other centralized, computerized military command and control projects--for containing world-scale conflicts--helped closed-world discourse dominate Cold War political decisions. Their apotheosis was the Reagan-era plan for a "Star Wars" space-based ballistic missile defense. Edwards then shows how these military projects helped computers become axial metaphors in psychological theory. Analyzing the Macy Conferences on cybernetics, the Harvard Psycho-Acoustic Laboratory, and the early history of artificial intelligence, he describes the formation of a "cyborg discourse." By constructing both human minds and artificial intelligences as information machines, cyborg discourse assisted in integrating people into the hyper-complex technological systems of the closed world. Finally, Edwards explores the cyborg as political identity in science fiction--from the disembodied, panoptic AI of 2001: A Space Odyssey, to the mechanical robots of Star Wars and the engineered biological androids of Blade Runner--where Information Age culture and subjectivity were both reflected and constructed. “Make sure your students follow your instructions.” That sounds like a straightforward instruction, but in fact, it’s fairly abstract. What does a teacher actually have to do to make sure students are following? Even the leader delivering this direction may not know, and the first-year teacher almost certainly doesn’t. The vast majority of teachers are only observed one or two times per year on average—and even among those who are observed, scarcely any are given feedback as to how they could improve. The bottom line is clear: teachers do not need to be evaluated so much as they need to be developed and coached. In *Get Better Faster: A 90-Day Plan for Coaching New Teachers*, Paul Bambrick-Santoyo shares instructive tools of how school leaders can effectively guide new teachers to success. Over the course of the book, we break down the most critical actions leaders and teachers must enact to achieve exemplary results. Designed for coaches as well as beginning teachers, *Get Better Faster* is an integral coaching tool for any school leader eager to help their teachers succeed. It’s the book’s focus on the actionable—the practice-able—that drives effective coaching. By practicing the concrete actions and micro-skills listed here, teachers will markedly improve their ability to lead a class, producing a steady chain reaction of future teaching success. Though focused heavily on the first 90 days of teacher development, it’s possible to implement this work at any time. New and old teachers alike can benefit from the guidance of *Get Better Faster* and close their existing instructional gaps. Packed with practical training tools, including agendas, presentation slides, a coach’s guide, handouts, planning templates, and 35 video clips of real teachers at work, *Get Better Faster* will teach you: The core principles of coaching: Go Granular, Make Feedback More Frequent, Top action steps to launch a teacher’s development in an easy-to-read scope and sequence guide The four phases of skill building: Phase 1 (Pre-Teaching): Dress Rehearsal Phase 2: Instant Immersion Phase 3: Getting into Gear Phase 4: The Power of Discourse

Communication disabilities are common, although their precise nature and degree of severity vary greatly among individuals. They are among the most handicapping of disabilities because they isolate a person and in so doing restrict social, educational, and occupational opportunities. One of the purposes of this book was to bring together theoretical, practical, and clinical knowledge from several disciplines that bear on language and communication into some reasonably accessible form. The intent is to provide a broad and multi-faceted view of language development and language disorders. Thus, contributions from education, linguistics, psychology, pediatrics, psychiatry, neurology, neuropsychology, and speech therapy are included. They describe our current knowledge of language development, suggest classifications for language pathology, outline what is known of the epidemiology of language difficulties, consider assessment and therapy, alternative communication systems and the impact of the new technology on communication aids. The variety of perspectives that it provides will make it particularly useful to the range of specialists who are concerned with the development of communication skills and language disorders.

This book examines the prevalence of emotional and behavioral problems in youth and the implications of little or low-quality mental health services available for them. It describes aspects of Positive Behavioral Interventions and Supports (PBIS) and school mental health (SMH) that work together to form a comprehensive service delivery model called the Interconnected Systems Framework (ISF). The term school behavioral health (SBH) is used to describe SMH and PBIS working together, as in the ISF. The book examines perspectives of key stakeholders through a series of research forums, during which participants identified critical themes for the advancement of SBH in South Carolina and the southeast region of the United States. Chapters address key themes of school behavioral health from these forums, such as collaboration, schoolwide approaches, quality of services, and support for specific populations, including military families and youth involved in the juvenile justice and child welfare systems. The book addresses barriers to providing behavioral health services at school as well as recommendations from key stakeholders for advancing SBH along these critical dimensions. This volume is a must-have resource for researchers, professors, and graduate students as well as practitioners, clinicians, and therapists across such interrelated disciplines as clinical child and school psychology, educational policy and politics, social work, public health, school counseling, family studies, juvenile justice, child and adolescent psychiatry, and child welfare and well-being services.

A well-performing education system is central to achieving inclusive development - but the challenge of improving educational outcomes has proven to be unexpectedly difficult. Access to education has increased, but quality remains low, with weaknesses in governance comprising an important part of the explanation. The Politics and Governance of Basic Education explores the balance between hierarchical and horizontal institutional arrangements for the public provision of basic education. Using the vivid example of South Africa, a country that had ambitious goals at the outset of its transition from apartheid to democracy, it explores how the interaction of politics and institutions affects educational outcomes. By examining lessons learned from how South Africa failed to achieve many of its goals, it constructs an innovative alternative strategy for making process, combining practical steps to achieve incremental gains to re-orient the system towards learning.

The Senate Committee on Labor and Human Resources and the House Committee on Education and Labor (now the House Committee on Economic and Educational

Opportunities) asked the Office of Technology Assessment to examine the potential opportunities and possible pitfalls of work-based learning that would be supported by the School to Work Opportunities Act (STWOA). Three main questions are addressed: (1) What are the alternative models of work-based learning and how effective are they? (2) What new learning technologies could support work-based learning? and (3) How can employers be persuaded to provide work-based learning experiences for students? This report assesses the potential of work-based learning as a component of the school-to-work transition systems that are currently being developed in many states and local school districts. Chapter 1 reports the findings about work-based learning and the STWOA. Chapter 2 discusses the history of work-based learning in the United States as well as problems with school-to-work transitions and provides an overview of STWOA. Chapter 3 describes and analyzes the apparent advantages and disadvantages of five learning processes that can be used in work settings: experiential learning, work-group learning, mentoring, workplace instruction, and technology-assisted learning. Chapter 4 discusses various ways that work-based learning can be structured with respect to the following: the types of students who are served; the program objectives; the coordination with schooling; the timing, intensity, duration, and progression of work-based experiences; the settings of work-based learning; and the issue of payment for students. Chapter 5 describes various models of school-to-work transition programs with work-based learning and summarizes the evidence on their effectiveness. These models are youth apprenticeships, clinical training, cooperative education, school-to-apprenticeship programs, school-based enterprises, and career academies. Chapter 6 considers the factors that influence whether or not employers will participate in work-based learning programs. (YLB)
