The Eureka Math curriculum provides detailed daily lessons and assessments to support teachers in integrating the Common Core State Standards for Mathematics (CCSSM) into their instruction. The companion guides to Eureka Math gather the key components of the curriculum for each grade into a single location. The Guidebooks can serve as either a self-study professional development resource or as the basis for a deep group study of the standards for a particular grade. For teachers who are either brand new to the classroom or to the Eureka Math curriculum, the Grade Level Guidebooks introduce them not only to Eureka Math but also to the content of the grade level in a way they will find manageable and useful. Dysphagia Assessment and Treatment Planning: A Team Approach, Fourth Edition is an ideal resource for dysphagia courses in speech-language pathology graduate programs. The unique value of this book is its multidisciplinary approach. Too often, speech-language pathologists function clinically with insufficient interaction with, or understanding of, the roles of other professionals involved with their patients. This text incorporates information pertinent to the roles, tools, and views of a multidisciplinary dysphagia team, including physicians, speech pathologists, nurse specialists, and dietitians, who work together on a daily basis. In this fourth edition, the organization has changed, with chapters concerned with assessment techniques coming first, and material addressing special populations comprising the latter portion of the text. This reflects what is likely a more typical approach to dysphagia in graduate courses concerned with the topic and one that complements teaching of the subject matter. Updates to the fourth edition include: The treatment chapter (Chapter 10) has been updated to reflect the current status of therapeutic approaches previously considered in treating dysphagic patients. Chapters dealing with nursing (Chapter 11) and nutrition (Chapter 12) have been updated to incorporate the latest recommendations in nursing care and dietary considerations for patients experiencing dysphagia. The pediatrics chapter (Chapter 13) has been expanded to address specific problems and needs not only of infants but also the entire spectrum of childhood. A chapter devoted to the esophagus (Chapter 14) addresses new information on the management of esophageal disorders, including the novel double-balloon dilation of the UES and a device for manually opening the upper esophagus. Chapters addressing special populations, including neurogenic disease (Chapter 15) and head and neck cancer (Chapter 16), incorporate the latest information regarding dysphagia and approaches to treatment pertinent to each group. A brand-new addition to the book is Chapter 18, which addresses dysphagia associated with alterations to the spine as a consequence of either disease or surgery.\*Disclaimer: Please note that ancillary content (such as documents, audio, and video, etc.) may not be included as published in the original print version of this book.

In *Assessment and Intervention for Executive Function Difficulties*, McCloskey, Perkins, and Diviner provide a unique blend of theory, research, and practice that offers clinicians an overarching framework for the concept of executive functions (EFs) in educational settings. The conceptual model of executive functions is detailed, including their role in behavior, learning, and production across all settings. The heart of the book focus on the practical issues involved in the use of assessment tools, tests, report writing, and the implementation and follow-up of targeted interventions using the EF model. Six case studies are introduced in Chapter 1 and followed throughout the book, building understanding of the executive function difficulties of each child, assessment for identifying the difficulties, and interventions for dealing with the difficulties. An additional case study is discussed in detail in one of the concluding chapters, and a companion CD will provide the practitioner with a wealth of assessment forms, parent and teacher handouts, behavior tracking charts, and report/documentation forms.

Before new interventions can be used in disease control programmes, it is essential that they are carefully evaluated in "field trials", which may be complex and expensive undertakings. Descriptions of the detailed procedures and methods used in trials that have been conducted in the past have generally not been published. As a consequence, those planning such trials have few guidelines available and little access to previously accumulated knowledge. In this book the practical issues of trial design and

conduct are discussed fully and in sufficient detail for the text to be used as a "toolbox" by field investigators. The toolbox has now been extensively tested through use of the first two editions and this third edition is a comprehensive revision, incorporating the many developments that have taken place with respect to trials since 1996 and involving more than 30 contributors. Most of the chapters have been extensively revised and 7 new chapters have been added.
