While critical race theory is a framework employed by activists and scholars within and outside the confines of education, there are limited resources for leadership practitioners that provide insight into critical race theory and the possibilities of implementing a critical race praxis approach to leadership. With a continued top-down approach to educational policy and practice, it is imperative that educational leaders understand how critical race theory and praxis can assist them in utilizing their agency and roles as leaders to identify and challenge institutional and systemic racism and other forms/manifestations of oppression (Stovall, 2004). In the tradition of critical race theory, we are charged with the task of operationalizing theory into practice in the struggle for, and commitment to, social justice. Though educational leaders and leadership programs have been all but absent in this process, given their influence and power, educational leaders need to be engaged in this endeavor. The objective of this edited volume is to draw upon critical race counter-stories and praxis for the purpose of providing leaders in training and practicing K-12 leaders with tangible narratives that demonstrate how racism and its intersectionality with other forms of oppression manifest within K-12 schooling. An additional aim of this book is to provide leaders with a working knowledge of the central tenets of critical race theory and the tools that are required in recognizing how they might be complicit in the reproduction of institutional and systemic racism and other forms of oppression. More precisely, this edited volume intends to draw upon and center the lived experiences and voices of contributors that have experienced racism in K-12 schooling. Through the use of critical race methodology and counter-storytelling (Solórzano & Yosso, 2002), contributors will share and interrogate their experiences while offering current and future educational leaders insight in recognizing how racism functions within institutions and how they can address it. The intended goal of this edited volume is to translate critical race theory into practice while emphasizing the need for educational leaders to develop a critical race praxis and anti-racist approach to leadership.

Americans have adopted a reform agenda for their schools that calls for excellence in teaching and learning. School officials across the nation are hard at work targeting instruction at high levels for all students. Gaps remain, however, between the nation's educational aspirations and student achievement. To address these gaps, policy makers have recently focused on the qualifications of teachers and the preparation of teacher candidates. This book examines the appropriateness and technical quality of teacher licensure tests currently in use, evaluates the merits of using licensure test results to hold states and institutions of higher education accountable for the quality of teacher preparation and licensure, and suggests alternatives for developing and assessing beginning teacher competence. Teaching is a complex activity. Definitions of quality teaching have changed and will continue to change over time as society's values change. This book provides policy makers, teacher testers, and teacher educators with advice on how to use current tests to assess teacher candidates and evaluate teacher preparation, ensuring that America's youth are being taught by the most qualified candidates.

Science, engineering, and technology permeate nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and future challenges. The United States' position in the global economy is declining, in part because U.S. workers lack fundamental knowledge in these fields. To address the critical issues of U.S. competitiveness and to better prepare the workforce, A Framework for K-12 Science Education proposes a new approach to K-12 science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. A Framework for K-12 Science Education outlines a broad set of expectations for students in science and engineering in grades K-12. These expectations will inform the development of new standards for K-12 science education and, subsequently, revisions to curriculum, instruction, assessment, and professional development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades should be built. These three dimensions are: crosscutting concepts that unify the study of science through their common application across science and engineering; scientific and engineering practices; and disciplinary core ideas in the physical sciences, life sciences, and earth and space sciences and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments.
