This is the account of the author's journey to lose weight and become one of the "beautiful" people. It is a somewhat humorous account of his quest which takes him to camps to learn Tai Chi, visits to a Zen Monastery, cooking lessons and more. Along the way he realizes his life of following fad diets has not worked and he begins to develop a 360 degree plan that will help reinvent himself. This plan is spelled out and includes a successful program of sustainable weight loss plus life habits which enhance his overall health and self-image as well. It is not a "cookie cutter" plan but guidance to look weight loss from a new and healthier perspective.

There are a lot of issues to consider as our loved ones get older. From in-home care to assisted living facilities, there are myriad options available - and each person's needs are unique. Family members need a resource that will answer all of their questions and ease them through this often complicated transition. This helpful handbook guides concerned children as they: decide which level of care is best for their parent; maintain communication and discuss difficult topics; handle home safety issues; manage transportation; find and work with a primary-care physician; navigate insurance paperwork; handle legal issues and questions; and other sensitive issues. From setting up a support network to avoiding scams, this informative guide will help a family decide on - and implement - the best care options for their loved ones.

Software systems for wireless and mobile communications are a key component in pervasive computing and are crucial for the materialization of easy-to-use and intel- gent services that people can use ubiquitously. As indicated by its acronym (MOBILe Wireless MiddleWARE, Operating Systems, and Applications), these are the type of systems that form the topic of the MOBILWARE conferencing series. In particular, the goal of MOBILWARE is to provide a forum for researchers and practitioners to disseminate and discuss recent advances in software systems for wireless and mobile communications, ranging from work on communication middleware and operating systems to networking protocols and applications. For its second edition, held in Berlin in April 2009, the MOBILWARE Organizing Committee decided to add a full day of workshops on topics related to the main c- ference. Our goals were threefold: 1. Put together a high-quality workshop program consisting of a few focused wo- shops that would provide ample time for discussion, thus enabling presenters to quickly advance their work and workshop attendees to quickly get an idea of - going work in selected research areas. 2. Provide a more complete picture of ongoing work by not only including technical workshops, but also workshops on business and user aspects. We expected that this multi-viewpoint approach would be an added value as technology, business m- els, and user experiences are usually interrelated. 3. Create a breeding ground for submissions for MOBILWARE 2010 and beyond.

This volume provides practical, but provocative, case studies of exemplary projects that apply digital technology or methods to the study of religion. An introduction and 16 essays are organized by the kinds of sources digital humanities scholars use – texts, images, and places – with a final section on the professional and pedagogical issues digital scholarship raises for the study of religion.

Less than a decade after the Financial Crisis, we are witnessing the fast emergence of a new financial order driven by three different, yet interconnected, dynamics: first, the rapid application of technology - such as big data, machine learning, and distributed computing - to banking, lending, and investing, in particular with the emergence of virtual currencies and digital finance; second, a disintermediation fuelled by the rise of peer-to-peer lending platforms and crowd investment which challenge the traditional banking model and may, over time, lead to a transformation of the way both retail and corporate customers bank; and, third, a tendency of de-bureaucratization under which new platforms and technologies challenge established organisational patterns that regulate finance and manage the money supply. These changes are to a significant degree driven by the development of blockchain technology. The aim of this book is to understand the technological and business potential of the blockchain technology and to reflect on its legal challenges. The book mainly focuses on the challenges blockchain technology has so far faced in its first application in the areas of virtual money and finance, as well as those that it will inevitably face (and is partially already facing, as the SEC Investigative Report of June 2017 and an ongoing SEC securities fraud investigation show) as its domain of application expands in other fields of economic activity such as smart contracts and initial coin

offerings. The book provides an unparalleled critical analysis of the disruptive potential of this technology for the economy and the legal system and contributes to current thinking on the role of law in harvesting and shaping innovation.

Mobile Assisted Learning emerged from Computer Assisted Learning, with researchers extending computer-based activities to mobile platforms, but differs from the latter in many ways. First, it is obviously mobile, but, second, smartphones have converged many features and software that were previously accessible through a range of digital tools. Thirdly, Mobile Assisted Learning allows interaction with social media. Educators are well-advised to consider smartphone video-based learning and to understand the many possibilities it affords. This book provides an account of the integration of smartphone video recording in the language classroom. It outlines and reports on the implementation process and the practical issues related to this learning method. Using simple digital storytelling, and mini-documentary filmmaking, students are able to learn to speak in a foreign language, while at the same time exploring and experimenting with video production. As such, this book will take readers on a journey through various educational concepts that enhance the formulation of a smartphone based learning approach, as well as suggesting that digital video production is not just a task, it is a 21st century skill necessary for all academics and learners.

This book is a response to the growing concern by social critics that we are becoming a de-voiced society through our preferences for hyper-textual, image-based forms of electronic connectivity. It interrogates the relational losses we suffer when we forget the value of the enchanting voice within immediate ear-to-ear relations.

This Manual is designed to be used as a compliment to and in conjunction with my book, "Your Better Self: A Simple Guide to Where You Want to Be." It can most certainly be read by itself as a proper book in its own right. However, there are allusions and references to content in the book such that some of the content of this Manual might appear incomplete. The purpose of the book is to offer scenarios and stories – slices of real life – so that readers can "self-identify" the specific areas of life they need to work on so they can increase their motivation and energy to straightforwardly manifest their worthy aspirations and more quickly become their better Selves. The purpose of this Manual is to be a companion to the book, offering additional content, stories, resources, tools and exercises to help readers delve more deeply into those areas of opportunity to improve themselves. Taken together, the book and this Manual provide all that is needed to begin to more rapidly and easily become your better Self and get what you really want in your life. When you read a chapter in the book that beckons you to explore that particular theme of life at a deeper level, pick up this Manual and go to that same chapter (the Manual has the same chapter names and sequence as the book) and read the additional content. More importantly, be sure to do the exercises as these will help you get clearer on the specific and unique ways YOU can become YOUR better Self.

Nomophobia - the fear of having our phones taken from us - is taking over our lives. The smart devices are in our homes, carried room-to-room as if glued to the hands of our family members. They meander into the bathroom, the laundry room, the shop, the garage, backyard and even into the bedroom where the adults once had their "alone time." Our teenage children require them to either be under their pillows, by their pillows or within arm's reach at a nightstand in order to even sleep at night. The cell phone must be visible for them to take tests at school without withdrawal anxiety. The phones travel where we do - school, the office, the gym, so that we are in constant contact with the virtual world - other people who also have no real lives outside of their phone. They are ringing in churches, movie theaters, restaurants, concerts, funerals. Nothing says "goodbye" to the recently departed like your ring tone from Metallica's Hardwired. Welcome to the world of smart phone addiction.
