No matter who we are or where we come from, we all play on the same playground. There are certain collective societal messages we hear growing up that we either consciously or subconsciously believe. As a result, we develop certain belief systems from which we operate our lives. Raising LGBTQ Allies sheds light on the deeper, multi-faceted layers of homophobia. It opens up a conversation with parents around the possibility they may have an LGBTQ child, and shows how heteronormativity can be harmful if not addressed clearly and early. Although not every parent will have an LGBTQ child, their child will jump rope or play tag with a child who is LGBTQ. By showing readers the importance of having open and authentic conversations with children at a young age, Chris Tompkins walks parents through the many ways they can prevent new generations from adopting homophobic and transphobic beliefs, while helping them explore their own subconscious biases. Offering specific actions parents, family members, and caregivers can take to help navigate conversations, address heteronormativity, and challenge societal beliefs, Raising LGBTQ Allies serves as a guide to help normalize being LGBTQ from a young age. Creating allies and a world where closets don't exist happens one child at a time. And it begins with each of us and what we say, as much as what we choose not to say. Informative, challenging and often humorous, this work explores mentoring the basic types of children and provides

Although in many ways this is a positive development it also presents challenges to families and practitioners who want to keep up with the latest developments and are left to sift through new information by themselves to see what is credible and relevant for them. Each of us needs a personal research assistant who can determine which information we need to pay attention to and let us know how it might affect our daily work and the children we are living with or serve. Since we each don't have our own research assistants on staff, I am delighted to recommend this wonderful book by Fred Volkmar and Lisa Wiesner. Both of these talented professional leaders have combined their scientific skills and understanding of the field with great practical experience and ideas about how research can be translated into clinical practice. The result is a book that provides the best and most comprehensive information about recent scientific developments and a splendid practical guide for how they are being implemented and what we are learning in the process. The issues are presented in all of their complexity but translated into language that is clear, direct, and easy to follow. The format also lends itself to understanding the complex issues and their implications through excellent charts, question and answer sections, and chapters that vary from describing diagnostic issues to stating very specifically how to expand and evaluate the services one is receiving. The comprehensive references and lists of additional resources also add greatly to the overall package. As a professional dedicated to understanding scientific advances and helping families and teachers to utilize them most

Most traditional history is a mere collection of headlines of monumental events. The true history of a man, women, or family however, is told in the innumerable daily events, both large and small, that collectively make a life. It is then the accumulation of these countless events occurring in an equally countless number of lives that ultimately create the true history of our world. Sadly, these individual stories are often lost to the ages, passing dimly away with their tellers, as the succeeding generations march on. More histories should tell the tales of the incidents, large and small, of the everyday lives of the everyday people of the world. *Histories From My Heartland* tells the everyday stories of six generations of a Midwestern American family.
